

Smart SAP Landscape Synchronization

Synchronization Challenges

Change is the one constant for SAP applications. Co-ordinating change across multiple SAP systems is complex and time consuming.

How can you implement change fast and ensure zero defects?

How can you synchronize multiple landscapes to ensure changes made to one system are reflected in another?

Smart Analytics

LiveCompare's unique, smart impact analysis allows users to analyze all SAP systems' configuration, code and data to discover what's the same, different and unique across multiple SAP systems.

Use LiveCompare to conduct cross-system comparisons such as ECC and BW.

Synchronize DEV, QAS and PRD systems and eliminate unreducible defect conditions.

Zero Defects

Maximize business agility and eliminate risk using LiveCompare.

Change and test SAP applications fast with zero defects.

Reduce test scope by at least 85%.

Total lifecycle support: upgrade, custom release, support pack, enhancement pack and more.
