

AUTOMATED DOSING WEBINAR

MOST ASKED QUESTIONS

Thanks for participating in Bright Agrotech's and AutoGrow's free webinar on automatic dosing. We love spreading knowledge to help out farmers such as yourself.

Please check out our other upcoming webinars here to learn more about. [Our next webinar](#) will teach the ins and out of a successful crowdfunding campaign.

We had almost 300 people sign into the webinar and we had a ton of great questions. We didn't get to answer all of them so we thought we'd give you some answers now.

Have some that didn't get answered? Call us on the phone or send an email. We live to serve you!

Biggest concerns with automation:

- **Cost: 54%**
- **Reliability: 31%**
- **Difficult to use: 10%**
- **Hard to maintain: 5%**

MOST ASKED QUESTIONS

Can you dose crops differently based on species?

Single zone dosers, like the IntelliDose, can only manage one reservoir's set points. AutoGrow's MultiGrow system can manage 8-10 zones with one main controller. This means that with a system like IntelliDose, you must find one single nutrient course for all of your crops. If you choose crops wisely, this is not a problem. If you wish to grow a crop outside of that range, then you may have to upgrade to a MultiGrow system.

(The MultiGrow works like our single zone controllers, managing all aspects of your environment, reservoir control, irrigation and monitoring. The MultiGrow can manage up to 8 different zones, fully customizable, so you only purchase what you need.)

Can you dose a crop differently at different stages in it's lifecycle?

You can lower the EC via the set points or the schedule features. This means that if you wish to see a higher or lower EC during a specific stage in the crop lifecycle, you can schedule that to happen.

Can you use organic nutrients with an AutoGrow system?

Yes, you can use organic nutrients, though they read a bit differently on a EC probe than non-organic nutrients. Your set points will be different, but the doser can manage an organic reservoir.

Is there a way to dose only pH?

Yes, our pH Mini Doser has been used quite often for this purpose.

Can I monitor and control an auto-dosing system from afar?

The [IntelliDose](#) comes with the free IntelliGrow software, which includes text/email alerts and data logging. There are many different remote access options, logmein.com is probably the most popular.

How long will an auto-dosing system last?

Warranties: 2 years on the controller and parts, 6 months on the pH probe.

*Our peristaltic pumps have a very long lifespan (upwards of 5 years). Simple maintenance, like cleaning them out and keeping them lubricated can increase the lifespan.

*If you keep the probe clean and properly calibrated, a pH probe should last you about a year.
