Pricing Guide for Horizontal Above NEMA Motors ANSP-60000-1112

General Information

As one of the World's leading provider of large motors with Global service and support second to none, Siemens sells and manufactures a complete line of motors at the ISO-9001 Certified Norwood, OH plant. This 350,000 square foot facility has produced over 150,000 high voltage motors continuously since 1898. The Norwood plant offers horizontal AC squirrel-cage induction motors through 18,000 horsepower and voltage ranges from 460 through 13200 volts. The plant also manufactures a complete line of vertical motors.

Larger induction motors as well as wound rotor and synchronous motors are also available from other Siemens plants located in Germany.

The following pages covers horizontal induction motors through 5000HP. It is intended for use in pricing the more common ratings, enclosures and modifications. Special features or applications which could affect frame size and, therefore seriously impact cost and price, should be referred to factory for price and availability. Ratings that fall outside those covered in this book, as well as all vertical motors, should also be referred to factory for pricing and availability.

For additional information and updates of our products and services visit our website at

www.usa.siemens.com/motors

and click on the "Large AC Above NEMA motors" link.

NOTE: This Pricing Guide for Horizontal Above NEMA Motors ANSP-60000-1112 supersedes all previous issues of the Pricing Guide for Horizontal Above NEMA Motors.

General Information

All ratings in this price guide are designed for the following;

- Horizontal Mounting
- 3 phase
- Class F insulation
- Service factor of 1.0
- Maximum temperature rise of 80 degrees C by resistance at 1.0 service factor
- Maximum 40 degrees C ambient
- Altitude of 3300 feet or less
- Direct connection to a typical centrifugal load with rated voltage and frequency applied at the motor terminals and a load inertia value equal to or less than NEMA value for the rating. Also, during accelerating period, connected load torque shall be equal to, or less than, a torque which varies as square of the speed and is equal to 100% of full-load torque at rated speed.

Frame sizes are estimated and are subject to change without notice. Frame sizes may have a suffix or combination of suffixes dependent upon enclosure, bearings, and/or features;

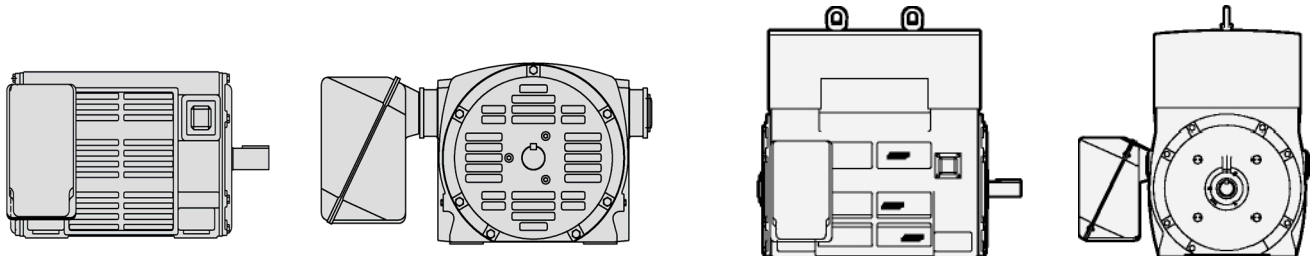

- D = Flanged. Indicates that motor is to be supplied with a D-flanged bearing housing.
- S = Short shaft. Indicates motor is to be supplied with Siemens standard short shaft extension for direct connection except on 680 frame series where no suffix is used.
- Y = Special mounting. Indicates motor is to be supplied with non-standard mounting dimensions.
- Z = Special shaft. Indicates motor is to be supplied with non-standard or special shaft dimensions.
- No Suffix = Indicates that motor is to be supplied with a Siemens standard long shaft extension except on 680 & 800 frame series. The long shaft is provided if Belt Drive modification is made from the Modification & Accessories Section.

Some 680 frame ratings can be supplied with grease lubricated ball bearings. Refer exact requirements to factory for price and availability.

Lead Times will be per the latest issue of the Norwood Product Lead Times document ANMC- 70000-xxxx.

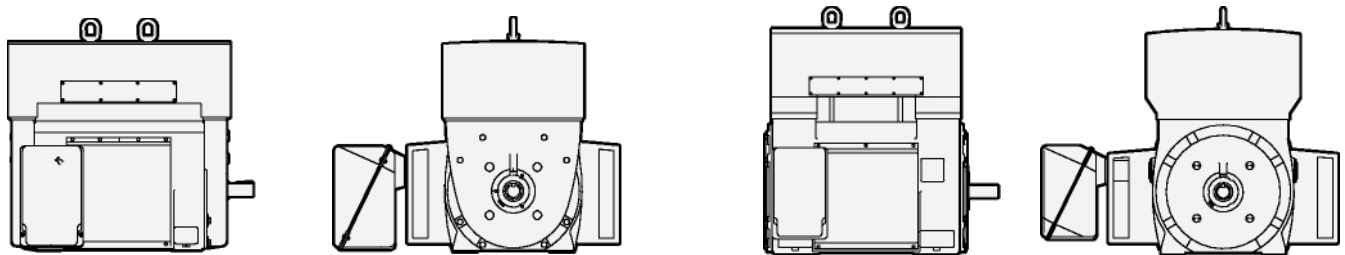

Pricing Guide for Horizontal Above NEMA Motors ANSP-60000-1112

Enclosures – Designed To Meet All Application And Environmental Needs

Horizontal Drip Proof / Weather Protected I (Type CG) / IC01 / IP23

Meets or exceeds industry standards for NEMA WP-type machines. Best suited for indoor applications where not exposed to extreme ambient conditions. Available through 10,000 HP.

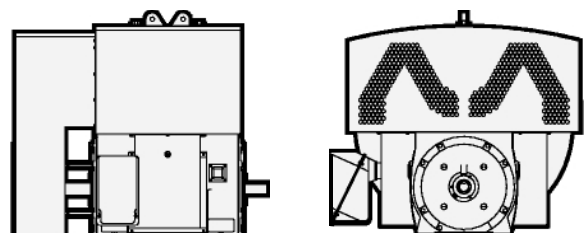

Horizontal Drip Proof / Weather Protected II (Type CGII) / IC01 / IP24

Meets or exceeds industry standards for NEMA WP-II-type machines. Specifically designed for outdoor applications where motor is not likely to be protected by other structures. Available through 18,000 HP.

Totally Enclosed Fan Cooled (Type CZ, CGZ, 1LA4) / IC411 / IP54-IP55

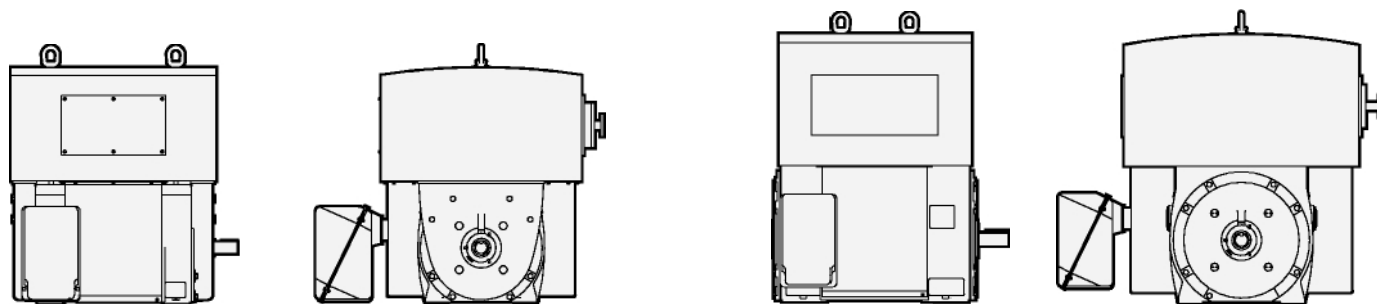

Designed for indoor and outdoor applications where internal parts must be protected from adverse ambient conditions. Utilizes cooling fins on all four quadrants of yoke and housings. Available through 3,000 HP.

Totally Enclosed Air-to-Air Cooled (Type CAZ) / IC611 / IP54

Designed for indoor and outdoor applications where internal parts must be protected from adverse ambient conditions. Utilizes air-to-air tube-type heat exchangers. Available through 14,000 HP.

Enclosures – Designed To Meet All Application And Environmental Needs

Totally Enclosed Water-to-Air Cooled (Type CGG) / ICW81 / IP54

Same critical design requirements as the air-to-air cooled machine with the added benefit of low noise and efficient water cooling. Available through 18,000 HP.

Machine Readable Product Description (MRPD) Structure

Siemens Norwood AboveNEMA motors has adopted the Machine-Readable Product Designation structure (MRPD). These designations, which are very similar in structure to those used by many other Siemens Business Units, will provide a clear means of product designation.

The benefits of adopting the MRPD codes include:

- 1) Consistent communication between regional organizations, field sales personnel and the business unit
- 2) Improved processes within Norwood
- 3) Enables smoother transition into product standardization
- 4) Provides a basis for product lead-times

The MRPD structure is generated by two segments:

- 1) Product codes - 12 Alpha-numeric characters which define:
 - Enclosure
 - Frame-size
 - Motor speed (Number of poles)
 - Rotor construction
 - Voltage / Frequency
 - Type of construction (horizontal, vertical, flange-mounted, etc)
- 2) Option codes - Standard accessories

The next several pages describe the Product Code structure for;

- Modular (ODP/WPI, WPIL, TEAAC and TEWAC enclosures) machines.
- TEFC machines.

In the Modifications and Accessories Section, you will find the Option Codes and Categories listed. It is important that these codes, both Product and Options, are clearly indicated on the orders.

The Categories, explained in more detail later, are listed as the minimum category for the given option. The base motor category or other options with higher categories may impact the overall category of the motor. The highest category will dictate the applicable lead-time of the motor.

Machine Readable Product Description (MRPD) Structure

MODULAR				Main Group	Sub Group	Factory	Frame-size		Reserved		# of Poles	Cooling Type	Rotor Type	Volts / Hz	Mounting		Options		
Data Position				1	2	3	4	5	6	7	-	8	9	10	11	12	-	Z

TEFC Enclosure per IEEE 841 Std™- 2009 (Order Code R61 / Category 2)

This specification addresses motor requirements on TEFC, anti-friction bearing motors through 500 HP. The Basic List Prices in the following tables include special features of this specification which are but not limited to;

- IP55 degree of protection which includes rotating shaft seals to provide maximum protection against contaminants entering the motor along the shaft
- Minimum guaranteed full load efficiency per IEEE 841 Table 2 (See General Comment #2)
- Cast iron fan housing
- Corrosion protection of rotor
- Alemite grease fittings
- Precision balance
- Maximum bearing temperature limits of 50°C for 2-pole, 45°C for 4-pole and slower
- Frame breather-drain
- Sealed leads between motor and terminal box
- Max. shaft indicator reading of 0.0015-in. for direct-connected, 0.002-in. if belt drive
- Motor foot flatness not to exceed 0.005-in.
- Special nameplate and auxiliary tags
- Testing per paragraph 9.2

General Comments to IEEE 841- 2009

All proposals to must contain the following comments in addition to any other applicable comments and/or exceptions already taken and depending upon the quotation request;

1. Para 6.8: Taking exception to 90 dbA sound power level. Quoting typical sound pressure level in dBA as measured per NEMA MG1, Part 9 at 3 feet and at no load. Consult factory for lower noise options.
2. Para 8.0: The minimum and nominal full load efficiencies per Table 2 are based upon efficiency evaluation per IEEE 112-2004, Methods E1 or F1 with assumed stray load loss.

Include Comment 3 if space heaters are quoted as a base feature or option

3. Para. 11.b: Taking exception and quoting space heaters with 160 deg. C maximum sheath temperature.

Include Comment 4 if motor if a hazardous location is not specified

4. Para 3.1.e: Motor offered is based on a non-hazardous area application.

Include Comment 5 if motor is not direct-connected and is to be V-belt drive

5. Para 6.1.d: Taking exception and quoting L10 life of 17,500 hours pending receipt and review of motor and driven sheave sizes as well as the size, type and number of belts.

Include Comment 6 if motor is 2-pole (3600 or 3000 RPM)

6. Para 6.9: Taking exception and quoting maximum vibration of 0.10 ips unfiltered as measured on the bearing housing.

*Per IEEE841-2009, Table 2.

Modifications & Accessories

Adjustable Speed Drives (Except any TEFC Enclosure or any 2-pole in a 6813 frame*)

The MRPD designation for motors used with ASDs is indicated in the motor's basic MRPD structure. Refer to the Section 1, Part MRPD for more details. Motors to be used with filtered VFDs and are 4:1 VT or are 2:1 CT have a minimum base Category 1.

***Any rating in a TEFC enclosure or any 2-pole ratings in any enclosure in a 6813 frame are not suitable for use with an ASD application. Refer to your local Siemens Sales representative for price and availability.**

Motors driven from an adjustable frequency control power source are subject to harmonics caused by non-sinusoidal wave shapes and voltage spikes. These may result in increased heating, decreased torque capability, and excessive shaft voltages; therefore, standard motor designs may not be suitable. Refer exact requirements including application (variable or constant torque), details of speed range, and type of inverter being used to your local Siemens Sales representative for price and availability.

Policy Statement IGBT/BRG Siemens Norwood AC Induction Motors IGBT Control Induced Bearing Currents

Siemens has had considerable, successful experience operating motors in the field in applications that utilize IGBT-type adjustable frequency controls. Throughout the industry, however, a few variable frequency control applications and installations have been shown to produce currents in the bearings of motors they control. Siemens Drives and Siemens Systems groups have the expertise and experience necessary to ensure the your installation is configured such that problem-free operation is attained. However, when Siemens motors are to be used with controls manufactured other companies, we defer system configuration details to that control manufacturer. If the application is such that a problem due to bearing currents could potentially occur then one of the following solutions should be implemented with the motor and control system;

- Use of a control output filter that reduces common mode voltage and the motor non-drive end bearing should be insulated.
- For 500 frame and larger motors in non-hazardous locations, insulate the drive end and non-drive end bearing and add a shaft grounding brush. Unless the grounding brush is provided on the motor drive end, an insulated coupling must be utilized to protect non-insulated bearings in the load equipment.

Motors constructed in accordance with (b) are available. Consult your local Siemens Sales representative for price and availability.

Pricing Guide for Horizontal Above NEMA Motors ANSP-60000-1112

Modifications & Accessories

Altitude - Above 3300 Feet

Motors are designed to operate within Class B temperature rise limits when operated at rated horsepower at altitudes up to 3300 ft.

Option Description	Category	List Adder
From 3301 - 5000 ft elevation - Utilization to Class F	1	3%

For operation above 5500 ft. altitude, refer to your local Siemens Sales representative for frame size and price.

Ambient

Motors are designed to operate within certain maximum temperature rise limits when the motor is operated in ambient temperatures from 0° C to 40° C. For Class B rated motors, the limit is 80° C rise by resistance at 1.0 service factor.

Option Description	Category	List Adder
From +40°C up to +45°C - Utilization to Class F	1	2%
From +46°C up to +50°C - Utilization to Class F	1	4%

NOTE: Sleeve bearings may require flood lubrication in an ambient above 40 degrees C. Consult your local Siemens Sales representative for determination of bearing lubrication requirement in ambient conditions above 40 degrees C. Conversely, if a sleeve bearing motor is known to be subjected to temperatures below 0°C, oil sump heaters are required and should be added to price...See List Adder under **Bearings - Oil Sump Heaters**.

Modifications & Accessories

API 541 – 3rd or 4th Edition (Please refer all inquiries to your local Siemens Sales representative)

API 547 – 2005 (Option Code R67 / Category 3)

Motor priced and offered using the following pages will not bear the API Monogram®. A motor requiring the application of the API Monogram® requires factory approval as well as receipt and review of the load curve, load inertia, and completed data sheets. Additional costs and lead time may be incurred.

I. Basic Scope

Ratings (hp)	# Poles	Voltage (V)	Mounting	Enclosures	Rotor Mat'l	Bearings	Frames
250 - 3000	4 - 8	2300 - 6600	Horizontal	TEFC or WPII	Copper > 1000 hp	Sleeve	500 - 680
< 800	2	2300 - 6600	Horizontal	TEFC	Aluminum	Sleeve	500 - 580
< 1250	2	2300 - 6600	Horizontal	WPII	Aluminum <= 1000 hp	Sleeve	500 - 580

1.2 Usual Service Conditions
a) -25 °C - 40 °C
b) <= 3300 ft
c) Indoor or outdoor, severe duty applications
d) Horizontal mounting
e) Installation in Div. 2 or Zone 2 locations
f) Constant frequency & sign wave
g) Not subject to transient voltages
h) Direct coupled

1.3 Unusual Service Conditions
a) Exposure to:
1) Combustive, explosive, abrasive or conductive dust
2) Dirt interfering with normal ventilation
3) Nuclear radiation
4) Abnormal shock or vibrations
5) Abnormal thrusts
6) Higher altitudes or ambient temperatures
7) Recip or positive displacement loads
b) Voltage or frequency variations greater than NEMA
c) Supply voltage unbalance greater than NEMA
d) Operation at speeds other than rated speed
e) VFD applications
f) Load inertia greater or starting conditions worse than NEMA
g) Vertical mounting

Modifications & Accessories

II. Siemens Standard Motor Features for API 547 - 2005

Paragraph	Accessory / Motor Feature Included
2.1.1	1.0 Service factor on sine wave
2.1.2	85 dB(A) @ 3 feet, unloaded, free-field, sine wave power, guaranteed <i>(except as noted in the comments section)</i>
2.2.2.7	Maximum 650% inrush current (based on NEMA inertia, standard centrifugal loads and FV starting)
2.3.1	Class B Temperature @ 1.0 SF by Embedded Detector (RTD)
2.4.1.2 & 2.4.1.3	300 series stainless steel screens
2.4.1.2 d.	Automatic drains (for TEFC motor only)
2.4.1.3	Stainless steel filters & provisions for differential pressure switch (WPII enclosures only)
2.4.2.2 & 2.4.2.4	Vertical jacking screws
2.4.2.7	Mounting surface criteria a. Mounting surface machined to 250 microinches b. Same horizontal plane within 0.005" c. Foot flatness within 0.005" d. Different mounting planes within 0.002"/foot f. Mounting surface shall be machined or spot-faced to a diameter of 2x the hole diameter
2.4.4	300 series stainless steel hardware
2.4.5.2	Copper rotor with phosphor-free braze material for >1000 hp (Aluminum die-cast for <=1000 hp) - <i>please refer to Typical Options Section for pricing of copper rotor on ratings <=1000 hp, if required by the customer.</i>
2.4.6	"Stiff-rotor" motor design except 2-pole, WPII in 680 frames and 2-pole TEFC in all frames
2.4.7.1.1	Split-sleeve bearings
2.4.7.2.3	Constant Level Oilers (All Sleeve bearings)
2.4.7.3.1	IP55 Shaft seals - <i>please refer to comments & exceptions section</i>
2.4.7.4.1	Both bearings insulated
2.4.9.3	Magnetic center and end float indication
2.4.10	C5 core plate
2.4.11	Special nameplates adjacent to all boxes and auxiliary devices
3.1.1	Main terminal box to have minimum dimensions based on NEMA MG1, Part 20 = ANSI Type II
3.2.1	100 ohm stator RTDs (2/phase) - PT100
3.3	Bearing RTDs to be supplied with sleeve bearings
3.4	Low temperature (200 °C) space heaters to be supplied
4.1.2	Routine testing – unwitnessed - includes (In addition to Siemens standard routine testing): - High-potential of stator-mounted devices - Polarization index - No-load bearing temperature stabilization run
4.1.3.1	Special balancing to meet vibration limits of 0.10 ips and spectrum frequency sweeps as defined by 4.1.3.1.
Standard	Ground pads

Pricing Guide for Horizontal Above NEMA Motors ANSP-60000-1112

Modifications & Accessories

III. API 547 – 2005 List Adders & Typical Options

Total Adder for API 547 - 2005			List	Comments
WP11	<= 1000 hp			
	500 Frames	All	\$40,523	Aluminum Rotors
	580 Frames	Except 588 or 5812 frames – 6 pole applications	\$41,046	Aluminum Rotors
		For 588 or 5812 frames – 6 pole applications	\$42,689	Aluminum Rotors
	< 1250 hp for 2 pole > 1000 hp & <= 3000 hp for 4 pole & slower			
	500 Frames		\$41,319	Copper Rotors
	580 Frames	Except 588 or 5812 frames – 6 pole applications	\$42,513	Copper Rotors
		For 588 or 5812 frames – 6 pole applications	\$44,154	Copper Rotors
	680 Frames	Except 6811 frame – 6 pole applications	\$41,160	Copper Rotors – Standard
		For 6811 frame – 6 pole applications	\$43,457	Copper Rotors - Standard
TEFC	< 800 hp for 2 pole <= 1000 hp for 4 pole & slower			
	500 Frames	All except 4 pole applications	\$47,920	Aluminum Rotors
		4 pole applications	\$51,433	Aluminum Rotors
	580 Frames	2 & 4 pole applications	\$55,969	Aluminum Rotors
		6 pole & slower applications	\$49,577	Aluminum Rotors
	> 1000 hp			
	580 Frames	4 pole applications	\$55,969	Aluminum Rotors
		6 pole & slower applications	\$49,577	Aluminum Rotors
	SH400 Frame	4 pole & slower applications	\$59,811	Copper Rotors – Standard
	SH450 Frame	4 pole applications	\$69,837	Copper Rotors – Standard
		6 pole & slower applications	\$59,811	Copper Rotors – Standard
	880 Frame	4 pole & slower applications	\$58,333	Copper Rotors – Standard
	SH560/SH562/SH564 Frame	4 pole & slower applications	\$54,581	Copper Rotors – Standard

Typical API 547 Options:		List Price	Applicable Frames	
2.4.1.3	S35 = Differential Pressure SPDT Switch	\$1,957	All Frames	
2.4.5.1.2	A02 = Vibration Probes = Bently-Nevada	\$28,196	All Frames	
2.4.5.2	R68 = Copper Rotors for <= 1000 hp	\$18,274	500 Frames	
2.4.5.2	R68 = Copper Rotors for <= 1000 hp	\$21,927	580 Frames	
Testing Options:				
Special Tests				
4.1.5	a) Complete Test	Unwitnessed	Frame Dependent	Refer to Tests Section
		Witnessed	Frame Dependent	Refer to Tests Section
	b) Unbalance Response	Unwitnessed	\$7,656 for WP11 \$9,806 for TEFC	All Frames
		Witnessed	\$11,955 for WP11 \$16,252 for TEFC	All Frames
	d) Sealed Winding Conformance	Unwitnessed	Frame Dependent	Refer to Tests Section
		Witnessed	Frame Dependent	Refer to Tests Section

Modifications & Accessories

IV. Comments, Exceptions & Clarifications to API 547 - 2005

- General: The pricing offered is for the base motor including Siemens standard routine (unwitnessed) testing.
- Para 1.2.a: Motors are quoted for 0 to 40°C as standard. Oil sump heaters should be added for self-lube applications below 0°C.
- Para 1.2.c: Motors are not suitable for offshore or severe corrosive duty as standard. Motor paint is Siemens standard if not otherwise specified.
- Para 2.1.2: Refer to the Section V. Noise Levels for API 547 – 2005 and make the appropriate exception per Note 1.
- Para 2.2.2.3: Motor design is based on a 100% Square Curve which means the connected load torque varies as the square of the speed and is equal to 100% of the rated full load torque of the motor at rated speed. This is subject to change upon receipt and review of load information.
- Para 2.4.1.2 TEFC) & 2.4.1.3 (WPII): If specified on Data Sheet or if installation is an offshore platform, we are taking exception to 316 stainless steel and offering 300 series stainless steel.
- Para 2.4.6: Refer to Section II. Siemens Standard Motor Features for API 547 – 2005 and add the following comment, "A "stiff-rotor" motor design will be supplied as the rotor does not have substantial vibration amplitude increase or shift in phase angle per resonance (natural frequency) definition in API 541, Appendix F, paragraph F.1.7."
- Para 2.4.7.1.5: The bearings used on SH400, SH450, 880, SH560, SH562, or SH564 frames feature line-to-line to clearance fit by design.
- Para 2.4.7.2.1 (WPII only): Taking exception to IP55-rated external shaft seals.
- Para 2.4.7.3.1: The seals provided on TEFC motors are not split.
- Para 3.4: Motor space heaters are not removable.
- Para 4.1.2: Only stator & stator-mounted devices will be high-potential tested.
- Para 4.1.3.2: Non-contacting eddy current probe measurements will only be taken when the probes are purchased with the motor. If only provisions for probes are purchased, the vibration limits per paragraph 4.1.3.1 shall apply.
- Para 4.2.1: The motor(s) offered will be provided with Siemens standard domestic packing. The motor(s) will not receive long-term storage preparation. If long-term storage preparation is required, please advise and Siemens will offer at an additional price.
- If Complete Test is added as a base feature or as an option, make the following comment: "Data Sheet 2 of 3, Line 32: A no load bearing temperature run (4.1.2.h) is not provided as standard when a Complete Test is purchased. Siemens reserves the option to use the procedure per paragraph 4.3.3.10 for hot vibration evaluation."

V. Noise Levels for API 547 - 2005

Low Noise Values for API 547 - Guaranteed, No-load, Free-field, 3 feet	
WPII Enclosures	
500 Frame <= 84 dB(A) - All speeds	
580 Frame <= 85 dB(A) - All speeds	
680 Frame <= 85 dB(A) - 2 pole / <= 84 dB(A) – all other speeds	
TEFC Enclosures	
500 Frame <= 90 dB(A) - 2 pole / <=85 dB(A) – all other speeds	880 Frame = 87 dB(A) - 6 pole
580 Frame <= 85 dB(A) - All speeds	880 Frame <= 85 dB(A) - 8 pole & slower
SH400 Frame <= 84 dB(A) - All speeds	SH560/SH562/SH564 Frame = 88 dB(A) – 2 pole
880 Frame <= 85 dB(A) - 2 pole	SH560/SH562/SH564 Frame = 89 dB(A) – 4 pole
880 Frame = 91 dB(A) - 4 pole	SH560/SH562/SH564 Frame <= 85 dB(A) – 6 pole & slower

Notes:

- The noise levels shown above may include sound attenuation measures. Also note that due to the sound attenuation measures, the standard dimensional print may not apply. Please refer to your local Siemens Sales representative for specific dimensions. **Please take appropriate exception to Para 2.1.2 of the API 547 Standard on those that are higher than 85 dB(A).**
- Please refer to your local Siemens Sales representative for frames not listed here or for motors with separately driven blowers.

Pricing Guide for Horizontal Above NEMA Motors ANSP-60000-1112

Modifications & Accessories

Assembly

As a standard, motors are supplied for horizontal, foot mounting and NEMA F-1 assembly.

Code	Option Description	Category	List Adder
K10	F-1 Assembly	1	No Charge
K09	F-2 Assembly	1	No Charge

For other mounting options, refer exact requirements to your local Siemens Sales representative price and availability.

Balance – Precision Balance for Low Vibration

All of our horizontal motors are designed to be within NEMA Standard vibration limits as a standard. NEMA Standards on vibration are defined in limits of unfiltered maximum velocity in inches per second (IPS) as measured on the bearing housing with motor on a rigid mounting. A precision balance with limits less than the NEMA limits is available per following chart.

Precision Balance		
Motor Speed	NEMA Standard Limits	Precision Balance Vibration Limits
2-Pole	.15 IPS	.10 IPS
4-Pole	.15 IPS	.10 IPS
6-Pole	.15 IPS	.08 IPS
8-Pole	.12 IPS	.07 IPS
10-Pole	.09 IPS	.06 IPS

Code	Option Description	Category	List Adder
R90	Precision Balance	1	\$1,264

Balance - Special

Two pole motors can be provided with special balance to obtain maximum vibration of 1 mil (.001 in.) peak-to-peak as measured on the shaft with shaft stick or 1.5 mils peak-to-peak with velocity probes, if furnished with motor.

Code	Option Description	Category	List Adder
R91	Special Balance - 500 & 580 Frames	2	\$4,619
R91	Special Balance - All Other Frames	2	\$7,363

Pricing Guide for Horizontal Above NEMA Motors ANSP-60000-1112

Modifications & Accessories

Bearings - Insulation

As a standard, all motors have the non-drive end bearing insulated. Use table below for insulation on both bearings for all direct-connected applications. Insulating both bearings is not available if motor is to be for a belt drive application where a sheave is mounted directly on the motor shaft.

Code	Option Description	Category	List Adder
L18	Both Bearings Insulated – 500 Frame	2	\$2,114
L18	Both Bearings Insulated – 580 Frame	2	\$2,602
L18	Both Bearings Insulated except 500 & 580 Frames	2	\$3,386

Bearings - Lubrication Systems

As a standard, anti-friction bearing motors are grease lubricated and sleeve bearing motors are oil lubricated.

Other lubrication options are available as follows:

Code	Option Description	Category	List Adder
R32	Oil Site Gauge	2	\$1,552
R33	Constant Level Oilers; 1/Sleeve Bearing (Oil Rite)	2	\$1,661
L66	Provisions Only for Flood Lubrication; Sleeve Bearings	1	\$1,221

Bearings - Oil Sump Heaters

For operation of sleeve bearing motors at ambient temperatures below 0°C, oil sump heaters in either 120V or 240V are required. Specify volts at time of order.

Code	Option Description	Category	List Adder
R36	Sump Heaters for Non-hazardous Areas (All Frames except 680, 880, SH560, SH562, or SH564 Frame)	2	\$2,412
R36	Sump Heaters for Non-Hazardous Areas - 680, 880, SH560, SH562, or SH564 Frame)	2	\$4,224
R36	Sump Heaters for Hazardous Areas (All Frames except 680, 880, SH560, SH562, or SH564 Frame)	2	\$6,232
R36	Sump Heaters for Hazardous Areas - 680, 880, SH560, SH562, or SH564 Frame)	2	\$7,437

Pricing Guide for Horizontal Above NEMA Motors ANSP-60000-1112

Modifications & Accessories

Bearing Protective Devices - Mechanical

A. Vibration Switch - Intended for use with anti-friction bearing motors. The device is mounted on the motor frame. List Adder is for mounting of one device.

Code	Option Description	Category	List Adder
R03	Robertshaw Model 365-A8 Vibraswitch	2	\$3,023
R03	Robertshaw Model 365-A8 Vibraswitch - Hazardous areas	2	\$6,645
R05	PMC / Beta 440 D-R	2	\$4,677

B. Seismic Devices – A vibration transducer system for measurement of acceleration or velocity is available. List Adder includes supply and mounting of one device at each bearing. List Adder for Provisions Only includes Siemens standard procedure includes a mounting block with a 2-1/2 inch diameter spot-face hole for device. Refer details of device to be used to your local Siemens Sales representative for review by factory prior to order acceptance.

Code	Option Description	Category	List Adder
R06	Acceleration Transducer System – Accelerometers; Bently-Nevada	2	\$8,335
R07	Velocity Transducer System – Velometers; Bently-Nevada	2	\$7,737
R08	Provisions Only for Vibration Transducers – Siemens Standard	1	\$1,264

C. Velocity Vibration Probes - For use with sleeve bearing motors only. List Adder includes installation of probes, proximeters, and cable wired to a common auxiliary terminal box.

Code	Option Description	Category	List Adder
A02	Two Radial Probes on Each Bearing; Bently-Nevada 3300 Series 8mm ¹	2	\$28,196
R00	Installation of One Phase Monitoring Probe ²	3	\$8,642
A39	Provisions Only for up to 2 Radial Probes per Bearing	2	\$7,330
R02	Provisions Only for 1 Phase Monitoring Probe ²	3	\$3,356

¹Internally-mounted radial probes or provisions for them are standard for all motors except Type CZ – 580 frame and larger. When Type CZ – 580 frame and larger motors are supplied with vibration probes or provisions for vibration probes, the "BA" and "C" dimensions will increase. Consult your local Siemens Sales representative or refer to the latest version of Dimension Prints for Above NEMA Motors ANSS-60000 for exact dimensions.

If externally-mounted mounted probes or provisions for them are required on motors where internally-mounted is standard, refer requirements to your local Siemens Sales representative for price and availability.

²Only available if purchased in conjunction with Code A02 – Two Radial Probes on Each Bearing.

Modifications & Accessories

Bearing Protective Devices - Temperature

Only one type of temperature device can be provided per bearing.

A. Resistance Temperature Detectors

Bearing RTD's are available per the following chart. Stick-type are available for either anti-friction bearing or sleeve bearings. Embedded-type are available for sleeve bearing only.

Code	Option Description	Category	List Adder
R79	(2) 100 Ohm Platinum (0.00385 TCR) DIN Std, single-element RTDs, 3-wire, 1/brg, stick-type	2	\$2,534
A42	(2) 100 Ohm Platinum (0.00385 TCR) DIN Std, dual-element RTDs, 3-wire, 1/brg, stick-type	1	\$3,060
B10E	(4) 100 Ohm Platinum (0.00385 TCR) DIN Std, dual-element RTDs, 1/brg, stick-type	1	\$6,122
R76	(2) 100 Ohm Platinum (0.00385 TCR) DIN Std, single-element RTDs, 3-wire, 1/brg, Embedded per API – sleeve bearings only	2	\$4,058
R09	(2) 100 Ohm Platinum (0.00385 TCR) DIN Std, dual-element RTDs, 3-wire, 1/brg, Embedded per API – sleeve bearings only	2	\$4,650
B10F	(4) 100 Ohm Platinum (0.00385 TCR) DIN Std, dual-element RTDs, 3-wire, 2/brg, Embedded per API – sleeve bearings only	2	\$9,299
R18	(2) 10 Ohm Copper (0.00427 TCR), single-element RTDs, 3-wire, 1/brg, stick-type	2	\$2,534
R20	(2) 10 Ohm Copper (0.00427 TCR), dual-element RTDs, 3-wire, 1/brg, stick-type	2	\$3,060
R19	(2) 10 Ohm Copper (0.00427 TCR), single-element RTDs, 3-wire, 1/brg, Embedded – sleeve bearings only	2	\$4,058
R21	(2) 10 Ohm Copper (0.00427 TCR), dual-element RTDs, 3-wire, 1/brg, Embedded – sleeve bearings only	2	\$4,650
R24	(2) 120 Ohm Nickel (0.00672 TCR), single-element RTDs, 3-wire, 1/brg, stick-type	2	\$2,534
R26	(2) 120 Ohm Nickel (0.00672 TCR), dual-element RTDs, 3-wire, 1/brg, stick-type	2	\$3,060
R25	(2) 120 Ohm Nickel (0.00672 TCR), single-element RTDs, 3-wire, 1/brg, Embedded – sleeve bearings only	2	\$4,058
R27	(2) 120 Ohm Nickel (0.00672 TCR), dual-element RTDs, 3-wire, 1/brg, Embedded – sleeve bearings only	2	\$4,650
R13	Provisions only for bearing RTDs or thermocouples, 2/brg	1	\$293
R22	Spring loaded fittings (for bearing RTDs or thermocouples stick type only)	1	\$827
R17	Stainless steel shielding for bearing RTDs (available only if purchased in conjunction with Bearing RTDs)	2	\$565

Modifications & Accessories

Bearing Protective Devices – Temperature (continued)

B. Thermocouples

Bearing thermocouples are of the dual element type in a stainless steel sheath. List Adder includes supplying one thermocouple at each bearing. Stick-type are available for either anti-friction bearing or sleeve bearings. Embedded-type are available for sleeve bearing only.

Code	Option Description	Category	List Adder
R11	(2) Type EE chromel-constantan, dual-element thermocouples, 1/brg, stick-type	2	\$1,560
R75	(2) Type EE chromel-constantan, dual-element thermocouples, 1/brg, Embedded – sleeve bearings only	2	\$1,754
R28	(2) Type JJ iron-constantan, dual-element thermocouples, 1/brg, stick-type	3	\$1,949
R29	(2) Type JJ iron-constantan, dual-element thermocouples, 1/brg, Embedded – sleeve bearings only	3	\$2,193
R34	(2) Type KK chromel-alumel, dual-element thermocouples, 1/brg, stick-type	3	\$1,949
R35	(2) Type KK chromel-alumel, dual-element thermocouples, 1/brg, Embedded – sleeve bearings only	3	\$2,193
R37	(2) Type TT copper-constantan, dual-element thermocouples, 1/brg, stick-type	3	\$1,949
R38	(2) Type TT copper-constantan, dual-element thermocouples, 1/brg, Embedded – sleeve bearings only	3	\$2,193
R13	Provisions only for bearing RTDs or thermocouples, 2/brg	1	\$293
R22	Spring loaded fittings (for bearing RTDs or thermocouples stick type only)	1	\$827

C. Thermometer – Dial-Type (For Sleeve Bearing Only)

Standard dial type thermometers are available for sleeve bearing units only in all frames except SH400, SH450, 880, SH560, SH562 or SH564 frames. They are capillary-type and are available with or without contacts. Standard operating range is typically 0° C to 120° C. List Adder includes supplying one thermometer at each bearing.

Code	Option Description	Category	List Adder
A70	Dial-type bearing thermometers, capillary-type, without contacts	3	\$6,884
A71	Dial-type bearing thermometers, capillary-type, with contacts	3	\$8,175
R13	Provisions Only for One (1) per Bearing Temperature Device	1	\$293

D. Temperature Relay (For Sleeve Bearing Only)

Standard bearing temperature relays are either indicating type or non-indicating type. List Adder includes supplying one relay at each bearing.

Code	Option Description	Category	List Adder
R42	Non-indicating bearing temperature relays (Remote Display Only)	3	\$7,745
R41	Indicating bearing temperature relays (Local Display Only)	3	\$8,605
R13	Provisions Only for One (1) per Bearing Temperature Device	1	\$293

Modifications & Accessories

Basic List Prices may be modified with the appropriate adder to provide sleeve bearings where anti-friction bearings are standard.

Code	Option Description	Category	List Adder
K96	500 Frames; Open Enclosures	1	\$6,027
K96	580 Frames; Open & TEAAC Enclosures	1	\$8,148
K96	500 Frames; TEFC Enclosures	1	\$9,996
K96	580 Frames; TEFC Enclosures	1	\$12,124
K96	SH400 - SH450 – 880 – SH560 - SH562 - SH564 Frames; TEFC Enclosures	2	\$28,200

Sleeve bearings are generally self-cooled, oil ring lubricated but some require external flood lubrication. See the following Lubrication Table for standard lubrication requirements based on a maximum 40 degrees C ambient and 60 hertz operation. Consult your local Siemens Sales representative for ambient temperatures above 40 degrees C, other than 60 hertz operation, and/or for self-cooling of bearings where flood lubrication is standard. Those units requiring flood lubrication are supplied with provisions only. Refer oil supply pressure, type of oil, and location of provisions (F1 or F2 side) to your local Siemens Sales representative for review by factory prior to order acceptance.

Sleeve Bearing Lubrication Table							
	3600 RPM			1800RPM			1200 RPM and slower
Enclosure	OPEN	TEFC	TEAAC	OPEN	TEFC	TEAAC	ALL
500 Frame	S	S	-	S	S	-	S
588/5810 Frame	S	S	F*	S	S	S	S
5812 Frame	S	F*	F*	S	S	S	S
680 Frame	S	-	F*	S	S	-	S
SH400 Frame	-	F*	-	-	S	-	S
SH450 Frame	-	F*	-	-	S	-	S
880 Frame	-	F*	-	-	F*	-	S
SH560/SH562/SH564 Frame		F					S

OPEN refers to ODP, WPI, or WPII enclosure.
S = Self lubricated **F*** = Flood lubrication required

***NOTE:** Self cooling of bearings may be possible on ratings where flood lubrication is required. Refer all details to your local Siemens Sales representative for price and availability.

Pricing Guide for Horizontal Above NEMA Motors ANSP-60000-1112

Modifications & Accessories

Belt Drive Applications

Motors to be used on belt drive applications have a larger shaft extension diameter and length than direct drive motors and have a roller bearing on the drive end. Motors with a ball bearing on the drive end should not be used on belt drive applications. Conversely, it is not recommended that motors with a roller bearing on the drive end be direct driven as excessive noise may occur. The chart indicates the minimum sheave diameters in inches recommended for belt drive motors in 500 and 580 frames. The adder can only be made to the ratings listed in the chart. For any drive applications falling outside of chart limitation, refer exact requirements to your local Siemens Sales representative for review by factory for price and availability. (List Adder does not include slide rails, see **Soleplates/Slide Rails** for appropriate addition.)

Code	Option Description	Category	List Adder

Modifications & Accessories

Cancellation Charges

A minimum charge of 10% of the order value will be assessed for any order cancellation. For any order less than \$ 5,000 (e.g. a parts order), a minimum charge of \$ 500 (five hundred U.S. dollars) will be assessed for any order cancellation.

The following graph will apply to determine cancellation charges after the order is received and entered at the factory.

A charge of 15% (fifteen percent) of the total motor price will be assessed if an order is canceled after it has been released for engineering and drafting whether or not the drawings have been completed and/or submitted for approval.

Chipper / Crusher Drives

These special requirements often include higher than standard inertia and/or torque requirements. Refer such applications to your local Siemens Sales representative for review by factory for frame, pricing and availability.

Pricing Guide for Horizontal Above NEMA Motors ANSP-60000-1112

Modifications & Accessories

Couplings

List Adder includes mounting only of shrink-fit, customer-supplied coupling which has been finish-bored and key-seated to our standard shaft dimensions. Couplings are to be sent freight prepaid to arrive at the factory at least six (6) weeks prior to scheduled shipment.

Code	Option Description	Category	List Adder
L17	Mounting of Customer-Supplied, Machined & Balanced 1/2 Coupling	2	\$3,386

NOTE: Mounting of couplings to special shaft dimensions or hydraulic couplings require procedures that vary with individual couplings. Refer to your local Siemens Sales representative for review by factory for availability and pricing.

Current Transformers

***NOTE:** Refer to **Terminal Box** elsewhere in this section for pricing options.

Differential Pressure Switch

Dwyer Instruments Model No. 1950-1 integral type, explosion-proof pressure switch can be furnished with filtered motors to measure pressure drops across the filter caused by clogging of particles in the filter.

Code	Option Description	Category	List Adder
S35	Differential Pressure SPDT Switch	1	\$1,957
S36	Differential Pressure Gauge	3	\$1,591

Direction of Rotation

Refer to Basic List Prices of rating. Those ratings indicated as "Uni-directional" in the "Rotation" column will require a direction of rotation (Option Code K97 or K98) to be specified at time of order placement.

Code	Option Description	Category	List Adder
K97	Clockwise Viewed from Motor Drive End	1	No Charge
K98	Counter-Clockwise Viewed from Motor Drive End	1	No Charge
K99	Bi-Directional Rotation	1	No Charge

Efficiency – Higher Than Standard

For a special high efficiency design refer exact requirements to your local Siemens Sales representative for price and availability.

Pricing Guide for Horizontal Above NEMA Motors ANSP-60000-1112

Modifications & Accessories

Export Packaging

For motors to be export packaged per Siemens standard for overseas shipment...**List Adder 6% to the total motor price.** Please add 5 working days to the standard lead-time for export boxing. See **Shipment Terms & Packaging** for additional information.

Fan - External Cooling

The chart below indicates standard cooling fan materials for TEFC (CZ & CGZ) and TEAAC (CAZ). Also indicated is price for alternate material.

Frame & Type (Enclosure)	Speed	Standard Material	Rotation
500 CZ (TEFC)	2-Pole	Aluminum	Uni-directional
580 CZ (TEFC)	2-Pole	Aluminum hub with non-metallic* blades	Uni-directional

S85	Steel Fan, Uni-Directional for All CAZ (TEAAC)	2	\$1,492

*Non-metallic blades may be polypropylene, polyamide, or vestamide. Consult your local Siemens Sales representative for exact material.

**Refer to the your local Siemens Sales representative for review by factory for alternate materials for SH400/SH450/880/SH560/SH562/SH564 TEFC frames.

Fan Housing

Standard fan housing on TEFC 500 & 580 frame motors is cast-iron. All other frame sizes have steel fan housings.

Pricing Guide for Horizontal Above NEMA Motors ANSP-60000-1112

Modifications & Accessories

Filters

All WP11 motors have standard provisions for addition of filters. Various types of filters can be supplied as optional equipment on WP11 motors. For filters on ODP or WPI enclosures, consult your local Siemens Sales representative. The standard filters below have an option Category 1.

Filters					
Code	Filter Material	Category	List Adder		
			500 Frame	580 Frame	680 Frame
S30	Galvanized Steel	1	\$992	\$1,064	\$1,408
S31	Aluminum	1	\$924	\$1,221	\$2,015
S32	Stainless Steel	1	\$1,864	\$2,364	\$3,368

NOTE: Other filter media is available. Refer exact requirements to your local Siemens Sales representative for price and availability.

Flanges

The MRPD designation for D-flange mounting is indicated in the motor's basic MRPD structure. Refer to the Section 1, Part MRPD for more details.

A D-flange is available for 500 and 580 frames in a ball bearing, single shaft, and direct connected application only. The D-flanged motor requires foot-mounted support. The D-flange is available for all enclosures in **Basic List Prices**. D-Flange is available per NEMA Standards or as Custom. The Custom D-Flange would require receipt and review of customer-supplied drawing by your local Siemens Sales representative for review by factory prior to order acceptance.

D-Flange per NEMA Standard			
Code	Category	Frame	List Adder
R60	2	500	\$3,712
R60	2	580	\$5,993
Custom D-Flange (Customer drawing required)			
R59	2	500	\$3,712
R59	2	580	\$5,993

Freight

As a standard motors are sold FCA-Loaded factory, freight collect with domestic packing only.

Frequency - 50 Hertz

For 50 hertz ratings not found in the Basic List Price section, increase required HP by a factor of 1.2 and round up to the nearest comparable 60 hertz rating. (Example: To find 400HP - 50 hertz rating, multiply 400HP x 1.2 = 480HP. Use comparable 500HP - 60 hertz rating). See **Voltage** in this section for proper Basic List Price selection.

Pricing Guide for Horizontal Above NEMA Motors ANSP-60000-1112

Modifications & Accessories

Ground Pads

Copper ground pads on motor frames.

Code	Option Description	Category	List Adder
R54	Copper Ground Pads on Frames	1	\$351

Hardware

Standard external hardware is 300 series stainless steel for all enclosures. Also available is #316 stainless steel for all enclosure bolts, studs, and other fastening devices up through 0.5-inch (M12) size. For other specific hardware requirements refer to your local Siemens Sales representative for pricing and availability.

Code	Option Description	Category	List Adder
R46	Stainless Steel #316 Hardware	3	\$4,302

Hazardous Location / Temperature Code

The MRPD designation for Division 2 areas is indicated in the motor's basic MRPD structure. Refer to Section 1, Part MRPD for more details.

- Division 2 - For Class I, Groups B, C, and/or D use appropriate list price and frame for the customer-specified enclosure for 1.0 service factor. The motor will meet NEC Article 500 definition for motors permitted in the Class I, Group(s), Division 2 area(s). NEC requirements and restrictions must be observed. Certification of the motor for use in the Division 2 area is not normally provided.
- Temperature Code: Most ratings are available as a T3 temperature code as defined by NEC. For designs to meet other temperature codes as low as T4 refer exact requirements to your local Siemens Sales representative for review by factory for price and availability.

Code	Option Description	Category	List Adder
D40	CSA Label for Class 1, Group D, Division 2 Only	1	\$234

For 1.15 service factor see **Service Factor** elsewhere in this section for proper sizing.

NOTE: The applicable Class(es) and Group(s) must be specified in the quotation and at time of order. For other classes and groups, refer exact requirements to your local Siemens Sales representative for review by factory for price and availability. Division 2 motors intended for adjustable speed drive application should be referred to your local Siemens Sales representative for review by factory.

IEEE 841 Std™-2009 (Order Code R61 / Category 2)

See Base List Prices, Frame, and Features Section 5B for price, availability, and comments on motors per IEEE841-2009 specification.

Inrush Current - Lower than Standard

Typical standard inrush currents for most ratings is a maximum 650%. Lower inrush currents are available. This will affect other performance characteristics such as locked rotor torque or breakdown torque. Refer exact requirements to your local Siemens Sales representative for price and availability.

Modifications & Accessories

Insulation

Motors are supplied with a class F insulation system as standard.

Load Inertia

The table below lists load inertia values which our standard, polyphase motors can accelerate without injurious temperature rise under the following conditions:

1. Rated voltage and frequency applied at the motor terminals.
2. During accelerating period, connected load torque shall be equal to, or less than, a torque which varies as square of the speed and is equal to 100% of full-load torque at rated speed.
3. Two successive starts with motor at ambient temperature, or one start with motor not exceeding rated temperature. Subsequently, the number of permissible starts will depend upon the time required to accelerate the load from stand still to full speed, the thermal capacity of the motor, and the time required for the motor temperature to return to rated temperature after each such start.

Driven equipment requiring higher than standard load inertia may require a larger frame size and/or special rotor designs. Refer exact requirements to your local Siemens Sales representative for price and availability.

HP	Standard Load Inertia (lb.-ft. ²) Exclusive of Motor Inertia							
	RPM

	6813	83	82	82	82
TEFC	509	86	84	80	80
	5011	85	85	80	80
	5013	88	88	80	80
	588	87	86	80	80
	5810	87	86	80	80
	5812	87	86	80	80
	SH400	85	82	81	80
	SH450	84	84	86	80
	880	85	89	85	81
	SH560/SH562/SH564	88	87	83	81
TEAAC	588	87	82	82	82
	5810	90	82	82	82
	5812	90	81	82	82
	6811	89	84	82	82
	6813	87	84	82	82

NOTE: Lower noise levels may be available. Lower noise level designs may affect motor dimensions. Refer requirements to your local Siemens Sales representative for details, price and availability.

Pricing Guide for Horizontal Above NEMA Motors ANSP-60000-1112

Modifications & Accessories

Paint Systems

Norwood's Standard Duty Paint System is a two-part epoxy system in Motor Blue. Refer to the adder below for Siemens Harsh Duty Paint System and Extreme Duty Paint System.

Code	Option Description	Additional Working Weeks*	List Adder
S03	Harsh Duty Painting System, Standard Color	1	\$4,541
S07	Extreme Duty Painting System, Standard Color – (All except WPII Enclosure in Frames 5810, 5812, 6811 & 6813)	2	\$19,791
S07	Extreme Duty Painting System, Standard Color – WPII Enclosure, Frame 5810	2	\$25,643
S07	Extreme Duty Painting System, Standard Color – WPII Enclosure, Frame 5812	2	\$24,517
S07	Extreme Duty Painting System, Standard Color – WPII Enclosure, Frame 6811	2	\$20,979
S07	Extreme Duty Painting System, Standard Color – WPII Enclosure, Frame 6813	2	\$24,462
S13	Standard Duty Painting System with Black Color RAL9005	0	\$1,694
Y53	Other Colors (Requires Additional Clarification - Munsell or RAL #)	1	\$1,694

*If purchased, these Additional Working Weeks must be added to any published motor Lead Times.

Rotor Construction / Corrosion Protection

The MRPD designation for Copper-bar Rotors is indicated in the motor's basic MRPD structure. Refer to Section 1, Part MRPD for more details.

See Basic List Prices section for standard rotor construction of rating. When a fabricated copper bar rotor is required by specification, use the following List Adder on the rating where a die cast aluminum rotor construction is shown as standard.

Copper Bar Rotor – Category 2		
Category	Frame	List Adder
2	508 - 5013	\$18,274
2	588 - 5810	\$21,927
2	5812	\$24,367

Code	Option Description	Category	List Adder
S02	Corrosion Protection for the Rotor	1	\$1,884

Pricing Guide for Horizontal Above NEMA Motors ANSP-60000-1112

Modifications & Accessories

Service Factor

For 1.15 service factor to accommodate overload conditions above rated horsepower, make the following list price additions to the basic motor price*.

Option Description	Category	
1.15 SF / Class F Temperature Rise	1	Use Same HP Rating
1.15 SF / Class B Temperature Rise	2	Next Larger HP**

*For non-hazardous locations only. For Division 2 locations, size motor by increasing required HP by 1.15 and round up to nearest HP.

**Size motor by increasing required HP by 1.15 and round up to nearest HP.

Shaft Extension

Standard shaft extension is a short shaft for direct connection. If specified at time of order, 4-pole and slower ball bearing motors can be supplied with a long shaft for direct connection at no charge. The long shaft is standard for belt drive application (See Belt Drive Applications elsewhere in this section).

For special shaft extension, tapered or threaded shafts, double shaft extensions on TEFC or TEAAC motors, stub shafts on two-pole compressor motors, shafts longer than 20", special shaft material or other variations, refer exact requirements to your local Siemens Sales representative for review by factory for price and availability. Customer must furnish taper gages.

Shaft Seal (Code R87,R88 / Category 2)

A shaft seal is sometimes referred to as a shaft slinger or shaft flinger. All anti-friction bearing motors are supplied with a rubber, V-ring, external shaft seal as standard on all enclosures. For alternate rotating shaft seal* on drive end of any enclosure, see chart below.

Rotating Shaft Seal – Category 2				
Frame	Drive End	List Adder	Both Ends	List Adder
500	Code R87	\$1,267	Code R88	\$2,540
580	Code R87	\$1,869	Code R88	\$3,739
SH400	Code R87	\$2,171	Code R88	\$4,337
680-SH450	Code R87	\$2,659	Code R88	\$4,842
880/SH560/SH562/SH564	Code R87	\$2,659	Code R88	\$5,318

*When motors are supplied with rotating shaft seal(s), the "BA" and "C" dimensions may increase. Consult factory for exact dimension.

All sleeve bearing motors are supplied with aluminum, labyrinth-type shaft seals. Alternate materials are available, refer exact requirements to your local Siemens Sales representative for price and availability.

Modifications & Accessories

Shipment Terms & Packaging

Standard shipment terms are FCA Loaded, Norwood, OH factory, freight collect with our standard domestic packaging only. Contact your local Siemens Sales representative for other Incoterms.

Software Packages

Software will be in our standard format and submitted electronically in the medium indicated unless expressly negotiated and entered as a separate line item on the purchase order. Our standard software package includes the following in *.pdf format;

- motor outline drawing
- the calculated motor electrical performance data including speed vs. torque, speed vs. current, and thermal limit curves
- motor instruction manual
- Our standard commercial test report

Additional software options;

- Shaft details data for purposes of torsional analysis...**List Adder \$605 (Option Code = U68).**
- Seismic analysis per item per location...**List Adder \$7,054 (Option Code = U66).**

Supplying software with additional information, in customer-specified formats, and/or in alternative electronic formats may be accommodated. Refer to **Norwood Product Lead Times ANCM-70000-xxxx** for software and documentation lead times and offerings.

Soleplates / Slide Rails / Shims

Code	Option Description	Category	List Adder
R93	Norwood Standard 2-piece Soleplates (500 & 580 Frames)	2	\$8,811
R93	Norwood Standard 2-piece Soleplates (All Other Frames)	2	\$10,583
R94	Soleplates with prov. for horizontal jackscrews (500 & 580 Frames)	3	\$15,489
R94	Soleplates with prov. for horizontal jackscrews (All Other Frames)	3	\$25,814
R95	Slide Rails for 500 & 580 Frames	2	\$5,074
R98	Stainless Steel Shims (Siemens Standard – 500 & 580 Frames)	1	\$2,059
R98	Stainless Steel Shims (Siemens Standard – All OtherFrames)	1	\$3,084
R96	Vertical Jacking Screws	1	\$234

For special custom made adapter bases to match motor to existing equipment, refer exact details to factory for availability and pricing.

Modifications & Accessories

Space Heaters

120/240 Volt, single phase space heaters with max. sheath temperature of **200 °C** are standard on all WP11 motors and are available as optional equipment on other enclosures. Heaters include leads wired to an auxiliary box mounted on the motor. Other voltages are available and exact requirements should be referred to your local Siemens Sales representative for price and availability.

Code	Option Description	Category	List Adder
R40	120/240 Volt, Single-Phase - Low Temp. (200 °C)	1	\$1,380

Starting - Reduced Voltage/Soft Start

Standard motors are designed for starting at 100% of nameplate voltage. Motors can accelerate normal loads at reduced voltage starting provided the voltage does not dip below 90% of rated voltage at the motor terminals.

For soft start or starting on voltages at less than 90% of rated voltage, special electrical designs may be required. Refer complete details of load to be accelerated (driven equipment speed vs. torque curve and load inertia), available voltages, and any other requirements to your local Siemens Sales representative for price and availability.

Startup Assistance

Field Engineering Services are not included in any of the prices of this pricing guide. We do offer complete installation, field engineering assistance, startup, and repair services. If any of the services are required or for more details on these services, please contact the Siemens Technical Support Communication Center at 1-800-333-7421.

Stator - Connections

For wye-delta connections*, three leads are provided as standard on single voltage motors, six leads are provided as standard on dual voltage motors.

Code	Option Description	Category	List Adder
S10	Wye-Delta Connection* - for Low Voltage Motors Only	2	\$2,643
S11	Heavy-Duty Bracing (500 & 580 Frames)	2	\$1,053
S11	Heavy-Duty Bracing (All Other Frames)	2	\$1,408
S16	Longer Than Standard Leads - Up to a Maximum 60 Inches	2	\$872

Modifications & Accessories

Stator - Insulation/Treatments

Generally, most low voltage motors have random wound coils with a polyester varnish type insulation. All motors 2300 volt and above have form wound stator coils with Siemens' standard VPI insulation system. For form wound 460 volt system, use list price and frame of comparable 2300 volt rating. Performance data may vary slightly from published data. All insulation systems are class F, non-hygroscopic and are supplied with EPDM rubber lead cable. Because of some environmental conditions, additional stator treatments are available. An anti-fungus treatment (tropicalization) is for humid areas and an anti-abrasion treatment is for areas that may contain abrasive particles that may circulate inside a motor. Anti-abrasion treatment is for ODP, WPI, or WPIL enclosures only.

Code	Option Description	Category	List Adder
S00	Anti-fungus protection for the stator – 500 Frames	1	\$377
S00	Anti-fungus protection for the stator – All other Frames	1	\$627
S01	Anti-abrasion treatment for the stator – 500/580 Frames	1	\$1,825
S01	Anti-abrasion treatment for the stator – 680/SH400/SH450 Frames	1	\$2,032
S01	Anti-abrasion treatment for the stator – 880/SH560/SH562/SH564 Frames	1	\$2,441

Stator - Protective Devices

- A. Resistance Temperature Detectors - Standard RTD options include a set of six, 3-wire RTD's with Teflon insulated, #22-gauge leads which meet IPTS-68 Standard.

Code	Option Description	Category	List Adder
R65	(6) 100 Ohm Platinum RTDs; 2/phase	1	\$1,377
R17	304 Stainless Steel Shielding for Stator RTDs (available only if purchased in conjunction with Stator RTDs)	2	\$565

- B. Thermistors - Standard thermistor option includes three Texas Instrument positive temperature coefficient (PTC) type sensors to be used with a Texas Instruments control module. Standard control module is manual reset type with trip indicator, 120 Volt single channel input. Modules with alarm channel are available at additional premium. Standard switch temperatures are 135° C, 155° C or 180° C.

Code	Option Description	Category	List Adder
A16	Thermistors - (6) PTC – 2/phase	1	\$1,509
R14	PTC control module	1	\$728

- C. Thermostats - Texas Instruments (Klixon*) thermostats can be furnished with either normally-open or normally-closed contacts wired to main terminal box.

Code	Option Description	Category	List Adder
R15	Thermostat - (2) TI Klixon; normally open contacts	2	\$507
R16	Thermostat - (2) TI Klixon; normally closed contacts	1	\$507

Modifications & Accessories

Terminal Boxes / Differential & Surge Protection / Current Transformers / Standoff Insulators

Auxiliary Boxes

Our standard, cast-iron auxiliary boxes meet NEMA 4X requirements and is segregated to house space heater and temperature instrumentation leads if those devices are purchased. Stainless steel is an option.

Code	Option Description	Category	List Adder
M51	Auxiliary Box - Stainless Steel	2	\$2,341
M52	Separate Box for Temperature Instrumentation (separate from space heater box)	2	\$842

Main Terminal Box

A – Main Terminal Box Size

The standard main terminal box is selected on the basis of full load current of the motor and exceeds NEMA volume requirements (see table below). The standard main terminal box location is NEMA F-1 unless specified otherwise at time of order (See **Assembly** elsewhere in this section).

HP	460 V or 575 V	<= 2300 V	<= 4160 V	<= 6600 V
Up to 700	CI2	CI2	CI2	CI3
701 - 1000	CI3	CI2	CI2	CI3
1001 - 1750	-	CI2	CI3	CI3
1751 - 3000	-	CI2	CI3	FS3
3001 - 5000	-	CI3	FS1.5	FS3
5001 - 7000	-	-	FS2	FS3

Basic List Price of motor includes main terminal box per following chart. For larger main box, if standard box is CI2 use the following List Adder otherwise use the List Adder difference between the standard box and the desired box size. For main terminal boxes on voltage over 6600V or for larger boxes than those listed below, please refer to the your local Siemens Sales representative for price and availability.

Code	Box	Option Description	Category	List Adder
U80	CI3	Cast-Iron – NEMA Type I (6370 cu. In. volume)	1	\$2,079
U81	FS1.5	Fabricated Steel – NEMA Type I (13900 cu. In. volume)	2	\$2,820
U82	FS2	Fabricated Steel – NEMA Type II (21750 cu. In. volume)	2	\$3,017
U84	FS3	Fabricated Steel – NEMA Type II (57276 cu. In. volume)	2	\$4,628

NOTE: Boxes CI2, CI3, and FS1.5 are mounted on the motor and are rotatable in 90-degree increments. Boxes FS2 and FS3 boxes will be free-standing with feet and will require customer to supply support from beneath.

Pricing Guide for Horizontal Above NEMA Motors ANSP-60000-1112

Modifications & Accessories

Use the following table to determine minimum main terminal box size for additional features and add for the additional features as listed below.

Additional Features	Minimum Box Required
(1) Ammeter CT	FS1.5 ^{(a),(b)}
(3) Current Transformers	FS2 ^(a)
Surge Protection	FS3 ^(c)
Standoff Insulators	FS1.5 ^(b)
^(a) Ammetering current transformer and (3) current transformers together requires FS3 box. ^(b) Ammetering current transformer and standoff insulators together require minimum FS2 box. ^(c) FS3 terminal box will accommodate any combination of the Additional Features listed above.	

B – Current Transformers / Differential Protection

List Price does not include main terminal box. Add for the appropriate main terminal box under “**Main Terminal Box**”.

Code	Option Description	Category	List Adder
U96	(1) Ammeter CT (either Main or Neutral Lead - <i>clarification text required</i>)	2	\$1,464
U90	(3) CT's for Differential Protection, 50:5, mounting in main box	2	\$4,399

C – Surge Protection and Accessories

Our standard surge protection consists of three lightning arrestors and one surge capacitor mounted in a fabricated terminal box. Price of these varies with motor voltage. See charts below for List Adders:

Code	Option Description	Category	List Adder
U92	Surge Capacitor and Lightning Arrestors (up to 4160 V)**	2	\$16,919
U92	Surge Capacitor and Lightning Arrestors (over 4160 V & up to 6900 V)**	3	\$23,232
U97	120/240 V Space Heater for Main Terminal Box	2	\$1,658

****NOTE:** Surge protection is not available for motors intended for use with an adjustable frequency drive application.

D – Standoff Insulators

Standoff insulators are standard feature of FS2 or FS3 terminal boxes. For FS1 terminal box, add per List Adder below.

Code	Option Description	Category	List Adder
U89	Standoff Insulators	2	\$3,417

Pricing Guide for Horizontal Above NEMA Motors ANSP-60000-1112

Modifications & Accessories

Tests

Each motor is given tests as may be deemed essential by Siemens. The following is a List Adder table and descriptions of additional test options. An unwitnessed routine test is included at no charge with all motors ordered. When test reports are required, they must be specified at the time the motor is ordered. The test reports will be per NEMA MG1-20. Where applicable, standard value of stray load losses to be used will be per Siemens Product Engineering Standard or IEEE112 unless specified otherwise.

Please refer to the Order Codes listed below		List Adder			
		Unwitnessed Tests*			
		250-500 HP	501-1500 HP	1501-2500 HP	2501-5000 HP

*NOTE: Add five (5) working days to lead-time for each Unwitnessed Test or ten (10) working days for each Witnessed Test.

Modifications & Accessories

Routine Test

Each motor is given a routine test in accordance with ANSI C50.41, NEMA MG1-12 and/or MG1-20 to assure that it is free from electrical and mechanical defects. Included in the test are;

- Measurement of resistance of winding.
- Measurement of no load, current, power, and speed at rated voltage and frequency.
- Insulation resistance.
- High potential test per NEMA MG1-20.
- Mechanical balance and vibration per NEMA MG1-7.

Complete Test

Complete test per NEMA MG1-20 and test analysis includes;

- Routine test.
- Determination of efficiency at full, 3/4, and 1/2 loads.
- Determination of power factor at full, 3/4, and 1/2 loads.
- Temperature run by either dual frequency method or by direct load.
- Locked rotor current curve. This is done at reduced voltage to prevent thermal damage to motor.
- Determination of locked rotor and breakdown torques.

Sound Pressure Test

Test procedure in accordance with NEMA MG1 part 9.

Bearing Temperature Test

To determine the stabilized bearing temperature at no load. If a minimum test duration time is required, specify on order.

Speed-Torque and Speed-Current Curves Test

To provide curves of torque versus speed and input current versus speed at specified input voltages.

Polarization Index Test

Polarization in accordance with IEEE 45.

Efficiency Test – Segregated Loss Method (E1)

This test is an efficiency test and analysis in full accord with IEEE 112, Method E1.

Efficiency Test – Equivalent Circuit Method (F1)

This test is an efficiency test and analysis in full accord with IEEE 112, Method F1.

Sealed Winding Conformance Test

To test the sealed windings in accordance with NEMA MG1-20.18.2 – Test For Which Stator Cannot Be Submerged.

Modifications & Accessories

Torques - Non-Standard

Starting or breakdown torques higher than standard usually require special rotor construction. If die cast rotors are standard, copper bar rotors may be required. Even where copper bar rotors are standard, special rotor bar material or rotor construction may be necessary. Refer to your local Siemens Sales representative for pricing, frame, and availability.

Voltages

The MRPD designation for Voltages is indicated in the motor's basic MRPD structure. Refer to Section 1, Part MRPD for more details.

For sizing and pricing of most common voltages use the following chart;

Voltage	For		Use
	60HZ	50HZ*	
380 – 600	440, 480, 575, 600	380, 415	460
601 – 2400	950, 1000, 2300, 2400	-	2300
2401 – 4160	4000, 4160	3000, 3300	4000
4161-4800	4800	-	Refer To Your local Siemens Sales Representative
4801 – 6900	6600, 6900	5500, 6000, 6600, 6900	6600
6901 – 13,800	Refer To Your local Siemens Sales Representative		

*See **Frequency** elsewhere in this section for proper motor sizing.

Warranty Offerings

For a copy of our Standard Warranty or for options of a Deferred Warranty or Extended Operational Warranties refer detailed requirements to your local Siemens Sales representative for pricing and availability.
