Product ID: 7007

Software Version: 6.0.2

Release Date: February 13, 2020

Overview:

This document describes the fixes implemented for this release. The previous version was 5.1.14 from May 17, 2019.

Improvements / New Features:

1. **ACORN-2358, ACORN-2355, ACORN-2356, ACORN-2357, ACORN-2367, ACORN-2364**
   Addressed critical fault configuration issue while performing a GUI Update.

2. **ACORN-2246   LAN IP is set to 169.254.100.1 and it is constantly displayed on LCD**
   LCD resets to show a valid LAN IP.

3. **ACORN-2251   Cannot set Tamper zone to Bypass**
   Tamper zone may be set to Bypass.

4. **ACORN-2247   Change the default TTL of IntelliTap packets to 3 hrs**
   Increased default TTL of IntelliTap packets.

5. **ACORN-2264   Not showing receiver 8 connected**
   Receiver 8 info now shows in TOOLS – IP Traffic.

6. **ACORN-1901   Rename 'Upload and Download' words in System Page of Acorn GUI according to what Alarm Industry uses**
   Adjusted titles to "Download Current Settings from Subscriber" & "Upload Preconfigured Settings to Subscriber" due to the ability to use different devices to access the config web GUI; pad, phone, Mac, PC, etc..

Bug Fixes:

1. **ACORN-2386   2.0 Subscriber - Timer Test Lag**
   A problem has been fixed where there was a significant error in requested check-in times versus actual check-in origination time. This timing error could exceed expected limits for declaring a missed check-in.

2. **ACORN-2207   Support Product Specific Package Files for Update - Web GUI**
   The BURG products previously supported the upgrade pkg filename format of **rootfs** (rootfs-*.pkg). They now also support a **model#** format (i.e. 7007_Release_*.pkg). If your subscriber is currently running installed firmware of 'rootfs-5.1.14.3622.pkg' or earlier, upgrade via the standard rootfs-*.pkg format, otherwise you may upgrade via model# filename format.
