Fleet Complete Web

Fleet Complete is an intuitive, flexible and easy-to-use web platform that brings all of your critical operations to one interface and eliminates switching back and forth between different systems. It provides you with the ability to track and manage your vehicles and assets, monitor your mobile personnel, and fully optimize your in-field operations in an environmentally responsible and secure way.

With Fleet Complete, you gain a one-stop-shop platform that connects you to all of your fleet resources, whether mobile or stationary, including your team in the field. It will help you automate time-consuming tasks, enable you to do more with less. You will see significant improvements in fuel utilization, vehicle safety, staff productivity, operational agility, better customer service and financial savings, giving your business the competitive advantage it needs.

Fleet Complete's comprehensive telematics platform was developed to address a wide variety of requirements, scaling to unique needs of businesses of any size. It provides full visibility into critical performance data together with business intelligence that will help you better manage your budgets, provide better quotes, and get an accurate accounting for the hours worked.

Scalable solution

Fleet Complete's versatile product portfolio allows the platform to be customized to your specific needs in fleet, asset and resource management at the time. Start simple and easily scale as your requirements change, or when your business expands. The platform can host everything from fleet tracking, asset management, and dispatch to task distribution, cargo monitoring, digital vehicle inspection, and electronic logbooks for optimal business set-up.

Internet of Things (IoT)

Fleet Complete is an IoT platform that delivers high-end connectivity and integration across the board. This connectivity is vital in collecting and analysing your in-field data from GPS trackers, sensors, and mobile applications, making your business a well-oiled machine. Now you can see your fleet's performance in near-real time, remotely manage staff and asset safety, and get customized report analysis, as detailed or top-level as you need in order to make smarter business decisions.

Actionable intelligence

Fleet Complete has 7 customized operational reports that can be run on-demand or scheduled to go out to specific team members on a regular basis. With continuous data flow from the field, you uncover opportunities to decrease operational expenses and improve business productivity.

Types of reporting included

Activity Report: Easily view how, when and where your assets are being used to maximize efficiency

Distance Travelled Report: Create optimized routes and delivery schedules to save on fuel costs while increasing customer satisfaction

Idling Report: Gain visibility into how often and how long vehicles are idling to coach drivers and protect your vehicle's health

POI Report: Increase safety by knowing when an asset arrives and departs at key locations

Stop Report: Identify opportunities for greater efficiency by seeing the frequency of stops being made by assets

Trip Report: Make smarter business decisions with insights into your fleet's trip lengths, fuel levels of each trip and more
