

DashLink ELD

Simple, Affordable, and
Flexible ELD Compliance

Electronic Logging Device (ELD)

Our DashLink device is a robust and easy-to-use ELD compliance solution for engine-connected logs.

Connected Compliance

BigRoad's DashLink is the easiest and most affordable way to create compliant engine-connected logs.

- Create accurate and error-free driver logs
- Interchangeable between vehicles and drivers
- Zero upfront hardware cost

Simplify the Logging Process

Driver duty status, vehicle drive time, and driver availability is automatically recorded from the engine, creating accurate logs and reports.

- Prevent HOS violations and report errors
- Create inspection ready logs
- Get paper-free digital reports

Plug and Play

Quick and effortless installation. Connect it to the vehicle and pair it with your BigRoad Mobile App via Bluetooth.

- Pass-through connections available for multiple ECM and diagnostic port types
- Easily switch between DashLink equipped and non-DashLink equipped vehicles

#1 Electronic Logging Device

BigRoad is the drivers' champion! It was the winner of the Customer Value Leadership Award in 2017 and continues to be a solution that drivers and fleets love.

Mobile App Made for Drivers

Our mobile app was designed with our owner-operator customers in mind. It is very easy to use and displays everything you need on one screen. You will get automated record-of-duty logbooks as well as inspection reports to show to the DOT inspector.

FMCSA Compliant

DashLink provides you only with the most accurate information on your Hours of Service. It is connected to your vehicle's ECM and captures engine power, vehicle motion status, miles driven and engine hours, as required by the FMCSA.

Reduce Fleet Downtime

Roadside inspections can be time-consuming, delay loads, and impact time-sensitive cargo. With automated Hours of Service logs, you can present clean and accurate reports to the DOT Inspector and have access to all critical information at a touch of a screen.

Inspect Your Vehicle in Minutes

Driver vehicle inspection reports (DVIRs) are time-consuming and have to be done before, during and after every trip. Now, you can speed up the process by logging all minor and major defects straight in the app and easily notify managers of needed maintenance.

Editable Logs

The logs are not set in stone and leave room for changes to accommodate unforeseeable events like bad weather conditions or traffic. Drivers can edit logs or violation warnings in the app with specific reason codes.

Know what to Expect

The app is configured to alert the drivers of upcoming violations so that they can take appropriate action when needed.

Manage Financial Risks

Avoid hefty FMCSA fines and penalties. Be audit-ready at all times. Get the most accurate IFTA reporting for tax breaks.
