

INSTALLER – FIELD SERVICES

Everything we do at Presray is about safety and protection. Our products include a broad array of watertight and airtight doors and other critical containment and security solutions. We protect everything from small businesses to large industrial facilities.

It all started in 1955 when Presray developed lifting devices for the aerospace industry using large inflatable rubber seals. We soon applied this same expertise in critical engineering to develop watertight doors and barriers. Our pioneering leadership was shaped by the stringent demands of the aerospace and nuclear industries. Today, Presray protects hundreds of businesses, academic and civic facilities. Whether it's providing flash flood protection to keep a Main Street business in business or providing complex systems for nuclear power plants, BSL4 research laboratories or cleanrooms, we take the same rigorous approach across hundreds of applications.

Major Responsibilities:

- To provide inspection, installation and repair services for air and watertight doors and systems.
- Schedule, plan, coordinate, perform and document repairs and inspections of existing installed systems.
- Schedule, plan, coordinate, perform and document installation of new systems.
