Forcura Scan Capture is the preferred home health and hospice solution for securely capturing and sending clinical images from any location and any device.

The app is ideal for field staff and clinicians that need to quickly complete and transmit clinical documents and images from anywhere in the field. All images and documents captured using Scan Capture are securely stored within the app. You have peace-of-mind knowing that all sensitive patient information is safe even if the device itself is lost or stolen.

With Forcura Scan Capture you can:
- Eliminate the need for fax or hand-delivery of remote documents
- Securely capture and route hard copy documents
- Expedite intake orders processing
- Deliver documents to the patient record in real-time
- Capture clinical images including wounds, etc.
- Use any device
- Ensure proper reimbursement

Maximize your field staff efficiency.

Features

Secure mobile and desktop access
Auto-edge detection
Document & image editing
Single sign-on
PIN and fingerprint authentication
Offline functionality
Send files securely to shared folders
Integration with Forcura Drive and the patient chart
Attach documents and images to the patient chart
Capture high-definition images and documents directly from any mobile device

Integrated Security

100% HIPAA Compliant
End-to-End Encryption
Nothing stored on device
Home Health & Hospice Organizations Drive Efficiency with Forcura Scan Capture

“I’ve completely removed paper from the equation and my staff can attach wound images directly to the patient chart, from anywhere in the field.”
— Gaffey Home Nursing & Hospice

Expand Your Intake Abilities

An efficient and uninterrupted intake process is vital to the success and growth of your business. Marketers and liaisons in the field shouldn’t have to stop to find a fax machine or drive back to an office to deliver referrals and other intake documents. Faxing can be inconsistent and hand-delivery can add to much time to the process, reducing the ability to accept the referral.

Scan Capture allows you to remove 100% of the paper from your intake process. Referrals and other documents captured with Scan Capture can be instantly delivered to your intake team in the back office to begin processing.

Deliver Documents to the Back-Office in Real Time

With nearly 90% of claims information being paper-based, getting the documents you need back to the home office can be a challenge for staff and clinicians in the field. Finding the nearest fax machine or hand delivering consent, power of attorney, or insurance forms is stressful, inefficient, and risky.

Scan Capture allows your staff to capture and easily route documents back to the office for processing and attachment to the patient chart.

Real-time electronic delivery eliminates the time to hand-deliver documents to the home office, so your staff can focus on caring for patients.

Use the Devices You Already Have

Gone are the days of carrying around clunky digital cameras and document scanners. These devices are unreliable and don’t integrate with your existing systems. They also can’t be easily secured to avoid potential HIPAA violations.
