

Prevent Tick Bites

Wear Repellent

Repellents containing DEET repels ticks to areas where they could still bite. Clothing repellents containing PERMETHRIN kills ticks. The best protection is to use repellents containing Permethrin on your clothes and repellents containing DEET on your skin.

Be Cautious of Tick-Infested Areas

Be cautious of ticks when doing outdoor activities like hiking, camping and yard work. Stay away from areas that are known to be tick-infested or have tick-infested signs posted.

Wear Light-Colored Clothing

Ticks can hitch a ride on your clothes undetected. Wear light colored clothing to make them easier to spot when performing tick checks!

Check Pets

After coming in from outdoors, it is recommended to always perform a tick check. Double check your pets as ticks can get lost in their fur and can transfer themselves onto you and your family.
