

# DataStealth

PCI Compliance made easy

## **SIMPLE DEPLOYMENT**

DataStealth is a plug-and-play platform that can deploy in as little as 2 weeks.

## **PROTECTION EVERYWHERE**

Get protection for data in all systems within your environment, including Cloud Applications and storage.

## **PROTECTION FOR EVERYTHING**

DataStealth is technology agnostic and works with any protocol, any payload, any data type.

## **DataStealth for PCI Compliance**

PCI Compliance audits are required for all organizations that 'store, process or transmit' payment card information. This annual audit has become very expensive and expansive as it adapts to the evolving challenges of building and sustaining a secure network. PCI audits typically require a significant investment of time, resources, and capital. They also may require large amounts of remediation in order to achieve a compliant status.

DataStealth removes ALL payment card information from applications, data and documents BEFORE it enters your network. Because your network does not contain any payment card information, your network is deemed to be out of scope for a PCI audit.

It's that simple!

With DataStealth, you can say goodbye to long, expensive and time-consuming audits, and receive an immediate return on your investment.
