

FORCARE

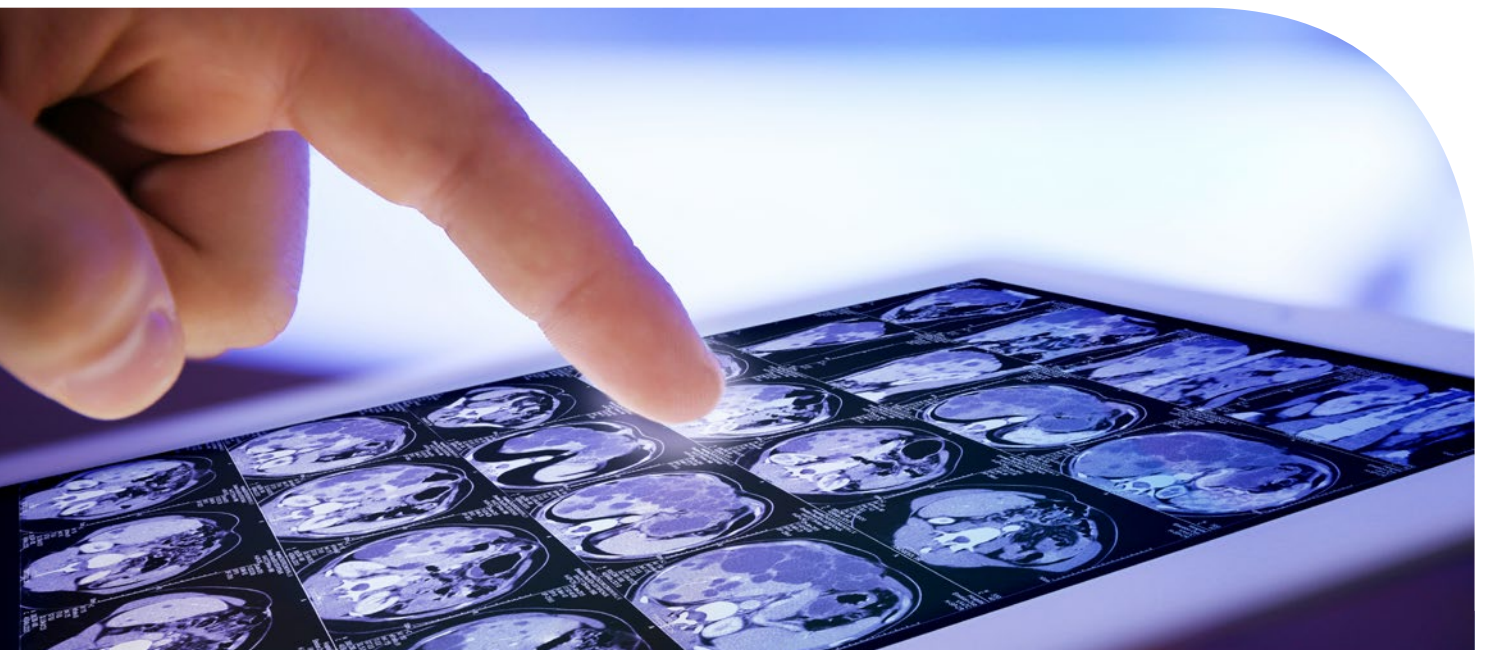

EMPOWERING YOUR FLOW

Connecting sources, simplifying workflows

Forcare understands the challenges you face in today's complex healthcare environment. And we have made it our mission to help you address them. Our goal is to streamline your workflow by enabling smooth data transfer between healthcare players. We envisage a seamlessly connected suite of information systems that create, manage and share clinical data – driving efficiency and ultimately enhancing quality of care.

Fast and flawless data flows

Forcare helps you build bridges between systems. This means staff at your organization can instantly share results, images and files in a variety of formats.

We work entirely with open standards so there is no vendor lock-in. Our products slot around your existing applications, avoiding costly investments.

We believe in pooling knowledge and best practices – within our own team and with our customers and their networks. That is why we actively participate in the Integrating the Healthcare Enterprise (IHE) initiative with a view to making healthcare better for everyone.

At the heart of everything we do, is the patient. We are committed to streamlining processes and supporting fast and efficient data flows – that ultimately enhance the quality of care and improve outcomes.

Forcare solutions are:

- **Open and flexible** - giving you freedom to work with your vendor of choice
- **Modular and scalable** - supporting you as you grow and evolve
- **Reliable and secure** - providing safe hands for sensitive patient data
- **Efficient and patient-centric** - helping you focus on what matters most

“Now we can access all relevant cardiac information available in the region through one single interface. This has greatly improved the efficiency of patient referrals thus improving the quality of patient care.”

Matty Lautenbach

Head of Cardiology Cardiac Catheterization,
Medical Centre of Leeuwarden.

Interoperability

Forcare’s sophisticated interoperability platform lets you bring data from multiple sources and multiple vendors together, simplifying exchange and communication between different systems. In short, it helps you ensure the right data gets to the right device at the right moment.

Open standards mean you’re not tied to a particular vendor, so you can work flexibly and connect a wide variety of systems. We understand the need for keeping sensitive healthcare data in safe hands, which is why our products come with watertight security.

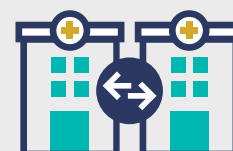

- Standards based
- No vendor lock-in
- Easy connectivity
- Reliable and scalable
- High-level security
- Future-proof platform

Referral Management

Our Referral Management solution lets you manage your workflows in a way that works for you and your patients. From sending patient documentation from the GP to the hospital, to receiving results – it accelerates data exchange. This streamlines communications between clinicians, supporting staff, departments and institutions.

The solution offers a standardized way to holistically manage referrals – while leaving scope for customization in line with your specific requirements. What’s more, a user-friendly interface helps you find the information you need fast, promoting short lead times and smooth working.

- Clinician driven
- Patient focused
- Easy implementation
- Simple, intuitive operation
- Increased throughput
- Improved user satisfaction

FORCARE
EMPOWERING YOUR FLOW

Forcare – Supporting enhanced patient care

Forcare was founded in 2006 with the goal of making a difference to interoperability in healthcare. And we have been putting this into practice ever since. Over the years, we have refined and strengthened our portfolio to meet the growing needs of the sector.

Our flexible solutions are designed to help you keep pace with dynamic requirements. By allowing you to streamline information flows, consolidate multiple sources, and seamlessly exchange data, we help you navigate an ever-changing environment. We have a clear focus on efficiency and enhancing quality of care. Using open standards, we aim to connect fragmentary systems on a central future-proof platform – supporting you now and in the future.
