## **Regional Mechanical Insulator Gains New Project Manager to Benefit Local and Regional Customers**

Burlington, Vt. - North Country Mechanical Insulators (NCMI), a mechanical insulation company specializing in insulation solutions for industrial and commercial facilities, as well as niche brewing and distilling operations, has gained the experience of new project manager Jon Kane, formerly of Big Dawg.

NCMI identified a need to bring an additional project manager on board to meet the demands of an increasing project count, and to manage the company's growing labor force. An additional project manager with knowledge and experience with insulation was necessary to increase the skill level of the existing workforce of NCMI as well.

"We interviewed several candidates who were qualified, but it made the most sense to bring Jon on as he is familiar with the area, has existing business and relationships in Chittenden County and the surrounding areas, and a vast knowledge of insulation as an insulation installer," said NCMI President, Jason Barron. "With greater management we can take on more insulators, train accordingly, have greater quality control, and build on the relationships that Big Dawg had and NCMI has."

Jon Kane, a well-qualified candidate with experience and good reputation among local business and contractors, comes to NCMI from owning his previous company, Big Dawg. Kane's familiarity and knowledge in both the insulation industry and as a business owner promises to serve NCMI well to improve services and support to local customers and business in the Burlington metropolitan area.

About North Country Mechanical Insulators:

*Formed in 1988, North Country Mechanical Insulators (NCMI) is leading New England in commercial mechanical services for new construction and retrofitting. The mission of NCMI is to help companies and organizations reduce their carbon footprint and conserve energy through facility insulation.*
