Keep Oracle Forms and Modernize

Oracle Forms is a traditional Oracle application development technology that works. But now, it's time to get your Forms applications up to speed with the rest of your business.

**Service
Brief**

Modernizing your Forms applications is just a step away

Many enterprises have Oracle Forms-based applications and are running very efficient operations. Yet, they wish they could have nicer dashboards, connect to web services, access Forms data from mobile devices or integrate other new technologies. It's all possible.

Thanks to the experts at Insum and Oracle Application Express, you can keep all the advantages of Forms while accessing more modern functionality.

Are you Forced to Give up Forms? No, of course not.

Ever wonder how many days of business you'd lose if you had to unplug every Forms application you'd built and start anew by migrating to a brand-new platform? Many vendors will tell you it's the only choice you have.

We're here to tell you can choose to keep all your well-oiled Forms applications because they dovetail so well with another Oracle Development platform called Oracle Application Express.

ORACLE[®]
Forms

Rapid Application Development to Modernize Oracle Forms

As a native Oracle product sitting inside your database, Oracle Application Express is robust, secure, and comes at no extra cost. In fact, it is already covered by your Oracle Database license. It was specially designed to work with other Oracle products such as Forms. It is based on the same programming language (PL/SQL) and shares the same procedural development approach.

It enables Insum and your development team to quickly build powerful, scalable and professional looking web and mobile applications that are 100% compatible with Forms.

Modernization Through Coexistence

The beauty of APEX is that it truly works in harmony with Forms. No data conversion is necessary. Also, in APEX much of the complexities of building and deploying an application are already taken care of. Using wizards, pre-built components, themes and templates, developers can very quickly build and deploy robust, stable applications with an unmatched ROI. In short:

- APEX enables you to leverage your organization's existing Oracle IT skillset (PL/SQL and Oracle Database)
- It is a 100% Oracle product that provides a seamless interconnection with your Forms applications
- It allows your developers to roll out applications quickly with little or now impact to existing installations
- Provides a seamless authorization process through Single Sign-on (SSO)
- Enables powerful browser-based dashboards and reporting of Forms data
- Allows for mobile applications

We'll Help You Bring Your Projects in On Time, And on Budget

We're APEX experts, and we'll guide you in your Forms modernization. We've assembled the world's foremost international APEX consultants and developers and created a tight, agile team that will coach your resources into becoming competent APEX developers, or, if you lack the time, do the entire project for you, from A to Z.

Oracle Specialists, APEX Experts.

Over the past 15 years, Insum has developed a highly efficient APEX methodology to help businesses get the most out of their investments. From user-friendly data entry forms to mobile applications to powerful dashboarding and drill down reports, we'll help modernize your Forms environment in ways you didn't even think possible.
