

PReS[®] Connect

OL™ Software

Speed & Power, combined

High speed creation and production
of high volumes of personalised
business communications

Inputs

Enhance
documents

Barcoding

Images & Text

Organise
your
output
stream

Print high volumes
at high speed

Output emails,
publish web pages

One solution to run it all

Create, process, format, enhance,
distribute and measure your
personalised business communications
with full automation capabilities.
For every stage of customer
correspondence management.

Output print,
HTML email,
text message
and web

Those outputs are
generated natively in PReS,
not converted from print
to HTML. The resulting
communications are infinitely
more flexible and stable
and every one of them is
created in the same tool for
increased productivity and
convenience.

Tailored to the
high volume
production
output market

PReS Connect works in
any IT environment and is
compatible with all hardware
brands. It comes with
AFP/IPDS and is available
with a selection of options
that make it possible to
customise every solution to
customers' needs.

Features

High volume output

Ability to receive data and print jobs in any format

Highly scalable performance with performance pack options

Simplified wizards

Graphical data mapping workflows

Wide variety of input possibilities including :

- PDF
- PostScript®
- PCL
- AFP
- XML

Full automation capabilities

Commingling

Multichannel output :

- HTML
- PDF
- PCL
- PostScript®
- AFP
- IPDS
- and more

Flexible service license agreement (SLA)

Our solutions are open and flexible so you can manage everything in-house. However, if you don't want to be bothered with it, our experts can do it for you, with a smile.

Flexible Licensing model

Do you prefer to pay upfront once? Maybe you prefer to subscribe and pay a smaller yearly fee? Choose the option that fits your needs.

Be smart with your customer communications

- ✓ Manage all your business communications in one place.
- ✓ Increase productivity by aggregating multiple types of input such as composed flows or raw data in a single process.
- ✓ Increase capacity and performance.
- ✓ Development, testing and maintenance of workflows are more productive.
- ✓ Improve customer service by creating the right output type (mail, email, text message or web), when the situation requires it and based on customer preferences.

Typical applications

Multichannel business communications

Print high volumes at high speed

Production automation

Hybrid mail

Correspondence management
