

Enercon E66-E92 User Group

The simple idea:

A technical user group in which owners of the same turbine model share operational experiences

Differentiator # 1:

The people being closest to the turbine

We want to add the practical people being closest to the turbine: site managers, engineers and asset managers directly and daily linked to Enercon E66-E92 turbines. Top bosses will just slow things down, although they are welcome to have an account to view value being created.

Differentiator # 3:

The global reach of O2O WIND

If your next improvement comes from Sydney, Tokyo, Hamburg, Madrid or Houston doesn't really matter. We operate serial produced machines with serial produced weaknesses. O2O WINDs global reach spans over 25 countries and six continents

Differentiator # 2:

Keeping knowledge fresh

Knowledge needs to be consumed either when it is news or when you need it. To achieve this we equip our users with an intranet and a messaging app to achieve structured, searchable and fast communications

Differentiator # 4:

Our only product: Owner-2-Owner Collaboration

All our cash flow comes only from wind asset owners. We have no sponsors who would might encourage us to tweak discussions to include their products or services. Nor do we have any other products, software, consultancy services that we would then try to sell you further down the road. Needless to say - our collaboration is only accessible for wind turbine owners. The value created in our collaboration will never be sold to anyone outside our collaboration.

Enercon E66-E92 User Group

Thanks
