

Health Records Mastered

Streamlining the Archival Process

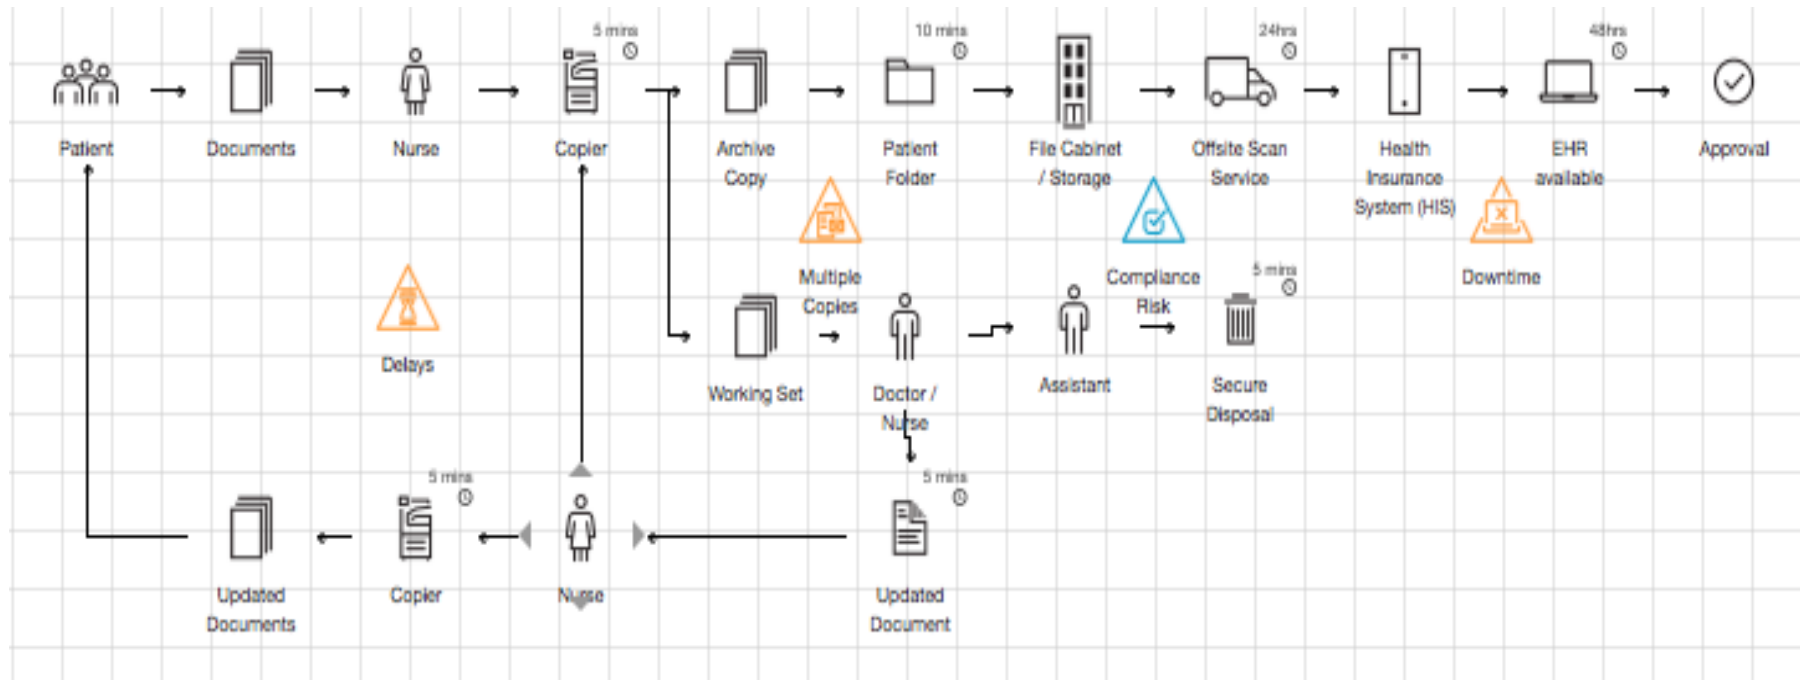

Business Goals

With the **eHR App** you can implement a time- and cost-efficient app solution in hospitals, clinics and medical practices, which makes the internal workflows of patient records smarter thanks to digitization.

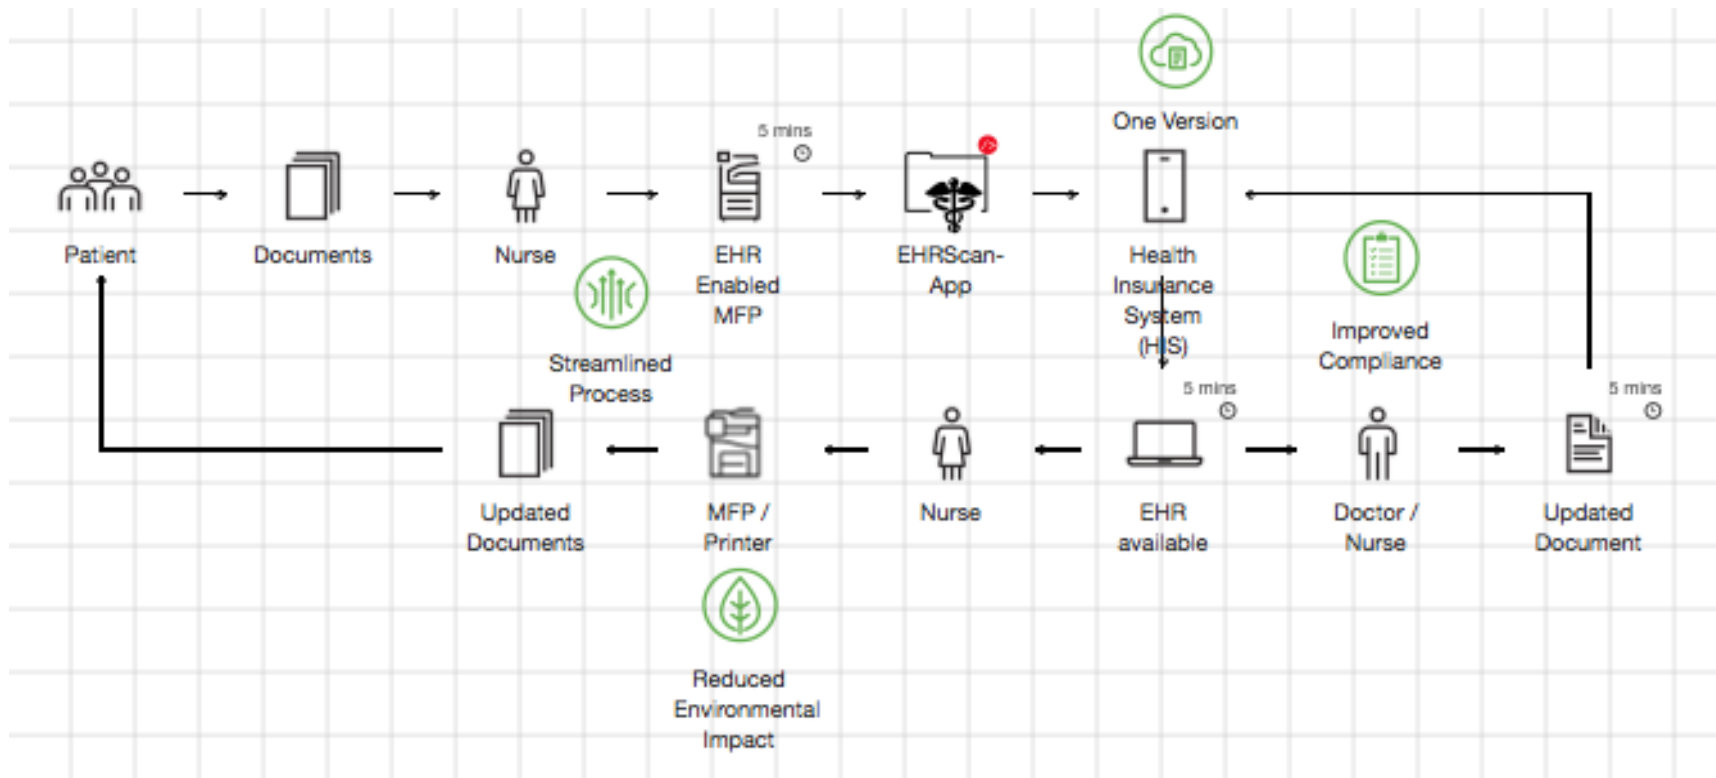

Challenges

Patients still carry their files from one doctor to another. In the age of digitization, this is an absolutely obsolete data carrier, which is slow and susceptible to interference. With the help of a suitable app, such as “Electronic Health Record“, this risk could be reduced immediately. After the scan files and findings can be forwarded directly to the respective doctors.

BEFORE

AFTER

Financial Savings

Faster treatment starts on the medical side and less time for the hospital staff for administrative acts. Only one scan must be done in order to create patient records for the doctor's and at the same time for the archive. The **eHR App** will reduce time for documentation processes. Initially valued 1.5 hours a working day for these processes can be reduced by 1 hour to 30 minutes per day.

In this time **more patient ca be treated**, that also means **more revenue** for the healthcare institution.

	Before	After
Employee cost	\$25 / hour	\$25 / hour
Time for documtentation processes	1.5 hours / day	0.5 hours / day
Employee costs a day	\$37.50 /day	\$12.50 / day
Employee cost per anno	\$9,375 /p.a.	\$3,125 / day
Employee working hours per anno	375 hours / p.a.	125 hours / p.a.
Employee cost saving p.a.	N/A	\$6,250 / p.a.
Employee cost saving p.a.	N/A	250 hours/p.a.
