

Patient Record Updates

Digitized workflow enhances patient care

Situation

A mid-size hospital is transitioning their patient records to a digital format. However, when patients arrive with hard copy documentation, the healthcare provider needs a way to digitize and archive the paper documents to update the patient's records.

Solution

Secure scan and print workflow allows for immediate access to the latest available patient records. Converted to a digital format, records reside in a singular central repository allowing the ability to update with new patient information.

Getting Started

Assess your customer situation. Do they have similar challenges?
Understand their technology requirements & current technology in place to store or process documents.
Choose technology and implementation options from Technology Required.
Decide how you prefer to monetize.

Technology Required

ConnectKey MFP's

AAA software (Authentication/ID card software)

PAB tools or contact an authorized developer

Analyst support for set up & integration with healthcare repository
