

# Scan to Family Search Cloud Services

## Direct scan to ancestral records

### Situation

Genealogists studying family history use services such as familysearch.com ®, a cloud enabled database that helps them to map, relate, store information and photos about people's ancestors. To assist in the collection, organization and utility of ancestral information, a central repository was required. To support this, users needed the ability to scan hardcopy documents and photos, name them appropriately and print when desired.

### Solution

**Foxway** solution offers easy integration with cloud services such as Family Search. Family search has more than 1 million users, and more than 120,000,000 visitors since the start. The end user with a need of print or scan and management of folders and information benefits from integrating the MFD into these cloud services. To use the detour by scanning to the PC is not always the most efficient or even possible alternative.

### Getting Started

Assess the end-customer with questions about any cloud based, or internal scanning or printing processes they regularly perform from the workstations or the MFD.

Understand their current technology infrastructure to support document storage or sharing.

Choose technology and implementation option from Technology Required.

Decide how you prefer to monetize and implement the solution.

### Technology Required

Xerox **ConnectKey** MFP

**Foxway Cloud Scan** services

If additional integration or functionality needed, ask for support directly from Foxway

### **Customer Benefits**

Digitized workflow increases productivity while reducing errors for the end-customer  
Increased security and workflow time savings
