

Security at the MFP

User ID card system improves security protection

Situation

After a security breach, a mid-size firm is implementing mandatory security policies to prevent confidential data and customer information from being accessed by unapproved sources. In response, the IT department implemented employee ID card access for PC's, to protect network devices from future incidents. Unfortunately, the MFP in the copy room is not protected.

Solution

To complement the new security policies, employee ID cards are also required to access the MFP to ensure user authentication. Employees simply swipe their badge at the MFP to release their print job while they are at the device for added security. To ensure confidentiality, the MFP is enabled with disk overwrite capability that erases sensitive data after the file is printed.

Getting Started

Assess your customer situation. Do they have similar challenges?
Understand their technology requirements & current IT infrastructure
Choose technology & implementation options from Technology Required
Decide how you prefer to monetize.

Technology Required

ConnectKey MFP

AAA Software (Authentication/ID card SW)
