

5 WAYS VERA SECURES CONFIDENTIAL DATA

Vera is a data security platform that secures any type of data - Office files, PDFs, videos, and more - everywhere it travels, and anywhere it's stored. Vera ensures only approved users can access your critical business information, and gives IT teams the tools to track, audit, and update access to sensitive information, even after it's moved offline.

1. SECURE CONFIDENTIAL DATA WITH A SINGLE CLICK

Secure any email attachment leaving your organization in Outlook, Apple Mail, and even webmail, or any file on your desktop with a single click. Easily secure your data with strong encryption and policy permissions that remain with the file, anywhere it goes.

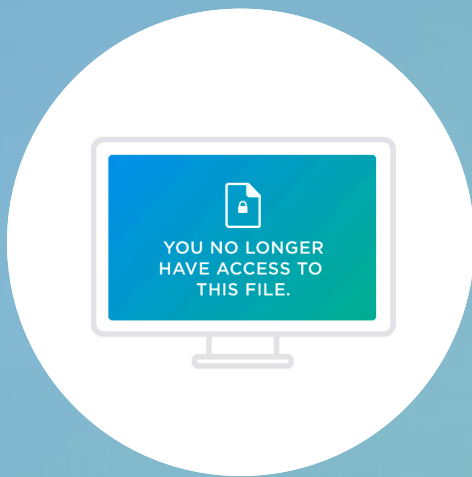

2. TRACK SENSITIVE INFORMATION, ANYWHERE IT GOES

Never lose control of a sensitive file, even if it's forwarded, copied, or posted to a public file share. See where your files are opened, anywhere in the world, in real time, and get a complete audit trail of everything you've secured or shared for compliance and regulatory purposes.

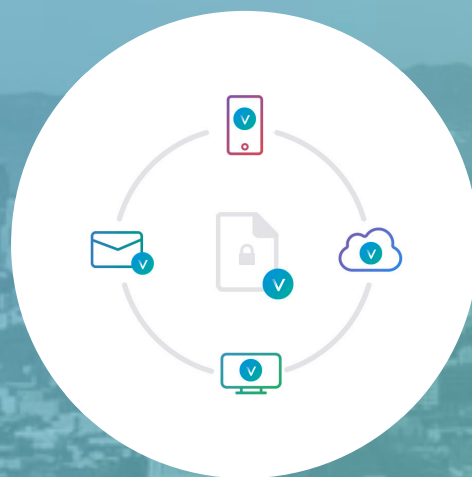

3. WATERMARK, AUTO-EXPIRE AND UPDATE ACCESS RIGHTS, INSTANTLY

Prevent data loss, stop unauthorized sharing, limit copying and screenshots of sensitive information with a Vera personalized watermark and view-only policies. Or, lock down files at a set time, even after they've left your control.

4. GET A RECALL BUTTON THAT ACTUALLY WORKS

Realized you sent the wrong file, or sent confidential data to the wrong person? Instantly revoke access to any Vera-protected file, and take back control even if it's been copied, forwarded, or shared online.

5. INCREASE SECURITY WITHOUT CHANGING THE WAY YOU WORK

Share securely with anyone, no special software, agent or plugins required, without impacting how you work. Seamless and consistent experience across Windows, Mac, iOS, and Android.
