

Original Example

Pie charts used to share survey results before and after a pilot program testing various learning modalities for technical training. These results were placed on two slides in a PowerPoint for presentation. Alternatively, some will place them side-by-side on the same slide.

Before Use

After Use

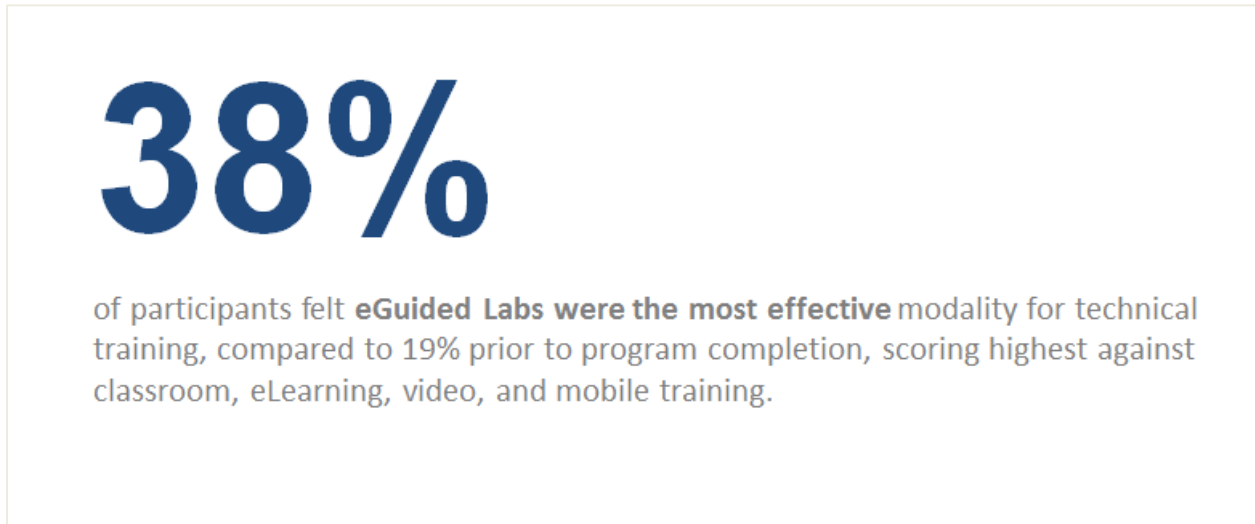

Revised Examples

There are a couple of different ways to present the data from the pie charts in data story format. Are you trying to justify investing in a specific program or request additional funds for a program? Maybe you want to highlight the shifting trends in technical training. Do you want to justify shifting investments from one program to another? Always consider what you are trying to accomplish with the data story and present accordingly.

Example A

Showcase the most positive result to tell a focused data story.

Alternatively, you could display the 100% increase from 19% to 38% for eGuided Labs as well.

Example B

Use comparative data and supporting text to create a more comprehensive data story.
