Robotic Options for Meeting Integrity Goals Under Social Isolation

Fewer man-hours, less exposure, more data than ever before!

The world is a very different place than it was just months ago. While minimizing human exposure on the job has always been our top priority, infectious viruses have raised the stakes.

Despite this new challenge, reliability, inspections, and the safety and productivity they insure, are as important as ever.

Gecko Robotics is helping customers around the globe meet their inspection goals, while keeping human site presence to an absolute minimum.

Our 2-man, robot enabled inspection teams have the following advantages:

- **Maintaining Distance** - 2-man teams can social distance easily on-site and maintain these rules during a “shelter in place” event.
- **Simple Logistics** - Gecko’s robots eliminate the need for most scaffolding and rope access, as well as the large teams they require.
- **Eliminate Inspection Backlog** - Highly efficient robotic crews can equal the production of larger traditional inspection crews, but at reduced number of people on-site.
- **No Compromises** - Gecko’s robots can provide high-density inspections that can match, or increase, RBI confidence in your inspection effectiveness.
- **Build a Catalogue of Baselines for Future RBI Calculations** - Data lives forever in an easy to maintain format.
