

Moisture Meter for Grain

G-7

The G-7 provides reliable results in every stage of grain production. Its microcontroller based circuit accurately measures moisture in the field. After harvesting, the G-7 helps determine if grain needs ventilation, is safe for storage, and meets market standards. The G-7 includes a connector for an external electrode, the ability to store readings, and a built-in calibration check. With calibrations for barley, coffee, corn, dried pasta, flax, hay, oats, rapeseed, rough rice, sorghum, soybeans, wheat, and rye, the G-7 is a vital tool from harvest to storage.

Electrodes & Accessories

830-2
10" prod for testing standard
and high density bales.
Requires H-4 handle.

831
Short pin disc shaped prod
used for testing hay in the
windrow. Requires H-4 handle.

832
Long pin disc shaped prod
used for testing grain in bulk.
Requires H-4 handle.

H-4
Handle that attaches to the top
of the meter for use with prods.

For 70 years, Delmhorst has been the leading manufacturer of high quality moisture meters and thermo-hygrometers. We offer a wide range of meters for a variety of applications including restoration, IAQ, flooring, woodworking/lumber, construction, agriculture, and paper. For further details on our entire line of products, visit us at our website.
