

## Stalwart<sup>®</sup> C Herbicide

Active ingredients: Metolachlor

A flexible, broad spectrum herbicide with multiple applications and timing options.

- Provides pre- and post-emergence control in soybeans
- Works excellently in a Roundup Ready Soybean Weed Control System
- An excellent addition to a Roundup Ready Soybean Weed Control System

**PACKAGING:** 260-gal. tote

## Stalwart<sup>®</sup> MTZ Herbicide

Active ingredients: Metolachlor, Metribuzin

Combination of two proven actives provides excellent control of tough weeds, including pigweeds and waterhemp.

- Early weed management on the front-end gives greater flexibility on the back-end
- Multiple modes of action make Stalwart MTZ an excellent tool to fight fungicide resistance
- Extended residual activity
- Excellent tank mix partner

**PACKAGING:** 260-gal. tote

# POWERFUL SOYBEAN SOLUTIONS FROM SIPCAM AGRO USA, INC.

Sipcaml Agro's soybean portfolio supports optimal weed control and disease protection to maximize yields and improve ROI.

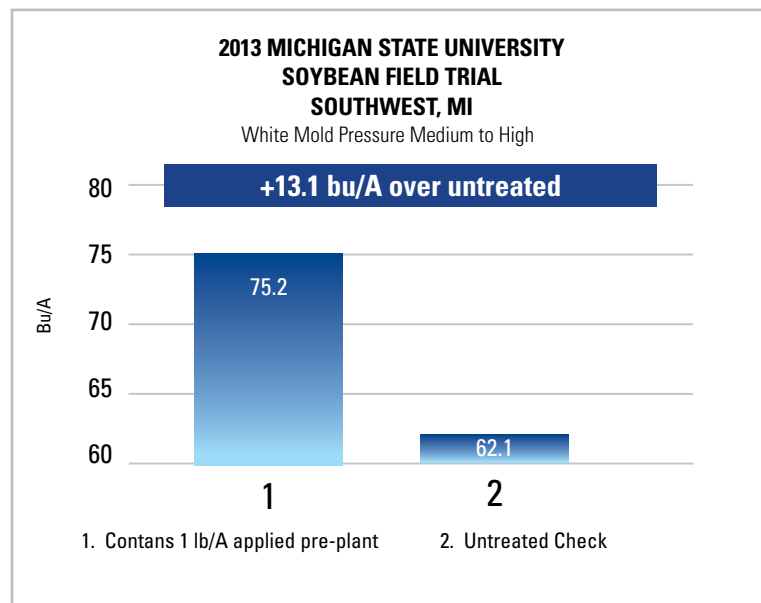

Active Ingredient: Coniothyrium minitans

The only fungicide that attacks and reduces the source of white mold in the soil, before damaged yields appear.

- Applied to the soil pre-plant, at planting, or post-harvest with traditional spray equipment
- Breaks the disease cycle by attacking disease organisms before they attack the plant
- Recommended as part of a comprehensive White Mold Strategy program, followed by a traditional foliar fungicide like Andiamo 230 at R1
- Can be tank mixed with many herbicides for one-pass application
- Fits both conventional and organic production – OMRI® Listed

RATE: 1-2 lb./A

PACKAGING: 25 lb. bag

## Andiamo<sup>®</sup> 230 Fungicide

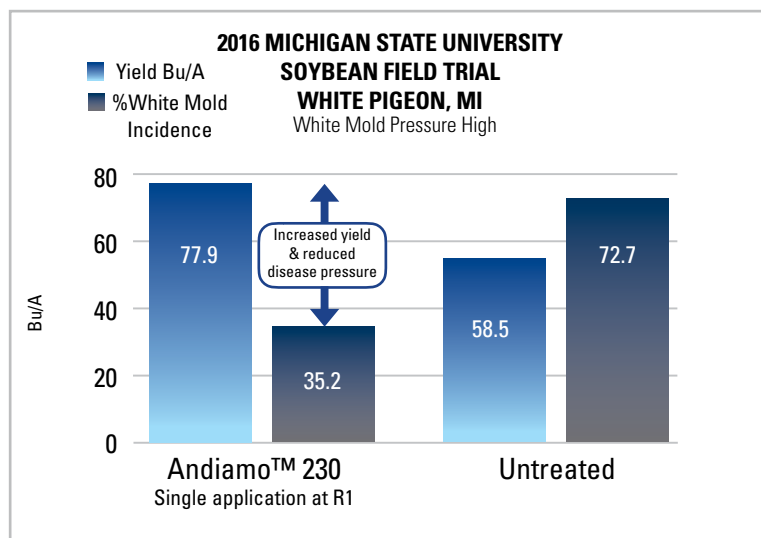

Active Ingredient: Tetraconazole

Andiamo 230 is recommended for control of frogeye leaf spot and white mold in soybeans.

- Superior disease control
- Excellent tool to fight fungicide resistance
- Compatible with other fungicides and easy to mix in low volume of water

RATE: 4-5 oz./A

PACKAGING: 2 x 2.5 gal. case

## Arius<sup>™</sup> ADV Fungicide

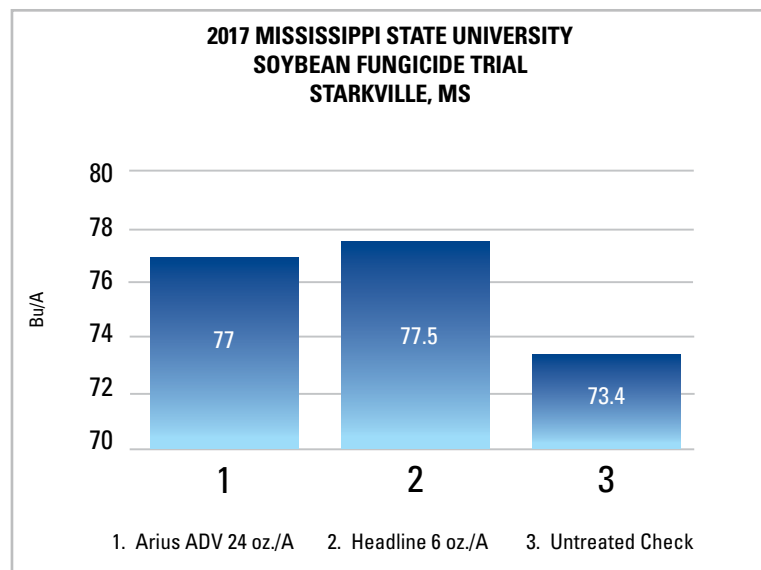

Active Ingredient: Chlorothalonil + Azoxystrobin

Arius ADV provides broad-spectrum disease control for high yield soybeans.

- Convenient premix of two powerful, proven ingredients
- Multiple modes of action make Arius ADV an excellent tool to fight fungicide resistance
- Offers preventative control with systemic and curative activity

RATE: 20-25 fl oz./A

PACKAGING: 2 x 2.5 gal. case

## Brixen<sup>™</sup> Fungicide

Active Ingredient: Tetraconazole, Azoxystrobin

Excellent soybean disease control for high yield soybeans.

- Broad spectrum control
- Multiple modes of action make Brixen an excellent tool to fight fungicide resistance
- Preventative and curative fungicide with systemic properties

RATE: 13-16 oz./A

PHI: 14 days

PACKAGING: 2 x 2.5 gal. case

Application: Aerial and ground applications

## Mazinga<sup>™</sup> ADV Fungicide

Active Ingredient: Tetraconazole, Chlorothalonil

Excellent broad spectrum soybean disease control for high yield soybeans.

- Multiple modes of action make Mazinga ADV an excellent tool to fight fungicide resistance
- Controls and protects new growth
- Excellent rainfastness
- Affordability provides strong ROI

RATE: 32 fl oz./A

PACKAGING: 2 x 2.5 gal. case
