National AED Registry™

Protecting Your Community by Connecting AED
Locations to EMS Agencies

WHY REGISTERING YOUR AED MATTERS?

Publicly available AEDs are rarely retrieved and used because bystanders can't see them and 911 dispatchers don't know they are there. In fact, public access AEDs are only used to help an estimated 5% of all SCA victims – typically only when a device is clearly visible within about 50 feet of the victim's location.

Dispatcher knowledge of the whereabouts of nearby AEDs can increase the effective coverage range of each AED from 50 feet (direct line of sight) to 600 feet (available at a brisk minute walk). A 2015 study by The American Journal of Emergency Medicine (needs citation?) showed that dispatchers knowing the location of AEDs and advising people where to find them reduced the time to apply an AED by 3.3 minutes.

Reducing the time to retrieve an AED by 44%* could significantly increase the chance of survival.⁽¹⁾

A FREE AED REGISTRY BUILT TO PROTECT YOUR COMMUNITY

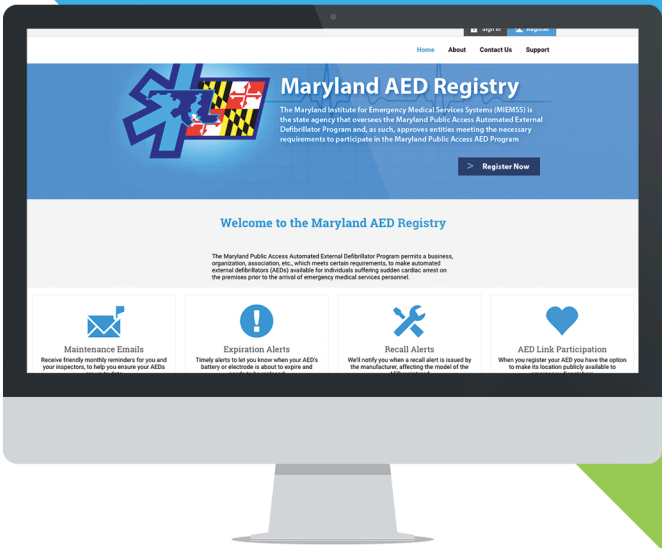

The National AED Registry™ (www.plustrac.com/national-aed-registry) is free to all AED owners.

It serves as a repository of important data about AEDs, and related AED program personnel and infrastructure, including:

- Individuals responsible for managing AED program sites and inspecting AEDs
- The identity of AEDs by the manufacturer, make/model and serial number
- The whereabouts of AEDs by physical address and specific placement location
- Specific days and times of AED availability
- The type and expiration dates of AED batteries and AED electrodes
- Organizations that are registered in the National AED Registry receive the benefits of being available for EMS / 911 location services where available through the AEDLink Dispatch software.

“The National AED Registry leaves me confident. It is, in a word...awesome! Your team hit the mark

Sgt. D Gunter, Supervisor | Durham Police Department

Many state, county, city and local municipalities have already partnered with the National AED Registry to create their own customized AED registry.

The National AED Registry™ is the largest data repository available to 911 centers in North America.

Additional benefits of registering your AED:

- Online management of AED location and maintenance information
- AED battery and electrode date expiration email reminders
- Faster AED notifications from manufacturer and government agencies

When combined with the AEDLink™ system, the National AED Registry™ and affiliated AED program management systems fill the critical information gap by generating and transmitting an up-to-date map in real time that can be used during a cardiac arrest call.
