Call for opportunities in the field of animal health

Goal: licence, acquisition or collaboration

We currently work for Virbac, an international pharmaceutical company in the animal health field, headquartered in France. Virbac has a global footprint including an active presence for over 20 years in the US with an R&D location in St. Louis, Missouri, USA. Erdyn helps them identifying new partner organizations and new opportunities for their product development pipeline.

Do you have any project fitting the following criteria? A research team or a start-up involved on these topics?

- **Species**
  - Companion animals (dog, cat, equine...), cattle, swine, aquaculture
  - Poultry and exotic pets are excluded

- **Therapeutic area**
  - All therapeutic area with a special interest for Parasiticides, Reproduction, immunology (anti-inflammatories, vaccines, anti-ageing, metabolic diseases, cardiology, arthritis, Renal diseases, cognitive impairment, dermatology, pain management, stress management, nutrition/feed, dental,...)
  - Diagnostic and pet food solutions are excluded

Send us a non-confidential slide deck presenting your project with the following information so we can connect you to our client:

- For your organization: relevant research team/PI, laboratory, equipment and other resources, specialties
- For projects available for licensing-in:
  - Concerned species
  - Readiness level of the technology and/or the experiments that have already been performed (we look for projects with at least a proof of concept in one of the species of interest).
  - The IP status of the innovation
