# The Ultimate Web Testing Checklist

## Functional Testing

**Forms** - Do your forms work? Are they available across mobile and desktop?

**Live URLs** - Are your redirect pages working and implemented? Are custom 404 error pages set up?

**Site Speed** - What is your average speed time for desktop and mobile? Do return visitors get quicker speed?

**Compatibility** - Are all popular devices, including older devices and global devices localised?

**Images** - Do images work on every device and browser? Are they formatted to fit different screen sizes?

## Stress Testing

**Simultaneous Users** - Have you simulated HTTP requests generated by a high volume of users to see how your site reacts?

## Usability Testing

**Navigation** - Does every user journey work and it is easy to navigate? Are there different journeys for different users?

**Search** - Are the search results accurate and linked to relevant pages?

## Security Testing

**Confidentiality** - Are all privacy settings tested and are third parties secure?

**Authentication** - How does your site verify that your users are who they say they are?

**Authorisation** - Does your application or website properly limit user privileges? Can an attacker take your app or website offline?

# The Ultimate Web Testing Checklist

## Localisation Testing

**Translation** - Is your site translated for global users? Are there any dialects or special characters that need to be introduced?

**Performance** - Is your site accessible and functional across a range of locations, even remote ones?

**Locality** - Have you added the right local offices and numbers for each location?

**Payment** - Do you offer a wide range of different payment methods and are they well-known and trusted in each location?

**Delivery** - Does your website or app accept different address formats, and are they catered for each location?

## Accessibility Testing

**Varied Users** - Have you included audio alerts, fonts, visual controls, rotated displays or colour coding?
