BEYOND THE BUZZWORD

How Artificial Intelligence can be applied to online brand protection?

Who Am I

Danae VaraDirector of Product at Red Points

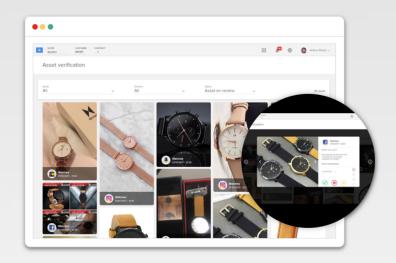

10+ years in the tech industry defining, developing and managing digital products and R&D solutions.

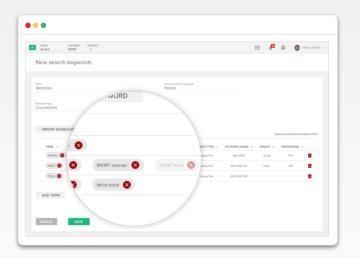

Currently I am in charge of **Red Point's IP monitoring and enforcement platform**, a cornerstone of the company's
solution against brand abuse which **detects more than 200,000 IP infringements every month.**

Brought by Red Points

Red Points is the most rapidly growing company offering game-changing cloud-based AI technology solution that automates the task of online brand protection.

Our software can protect brand assets on multiple platforms on a global scale. We offer the fastest, most comprehensive, and cost-effective protection in the market.

Red Points is the smartest online brand protection solution, and that's why more than 20 new customers move to us every month.

Artificial intelligence Machine learning Deep learning Image recognition Natural language processing Neural networks Data mining

So tell me...
Poll on Machine learning

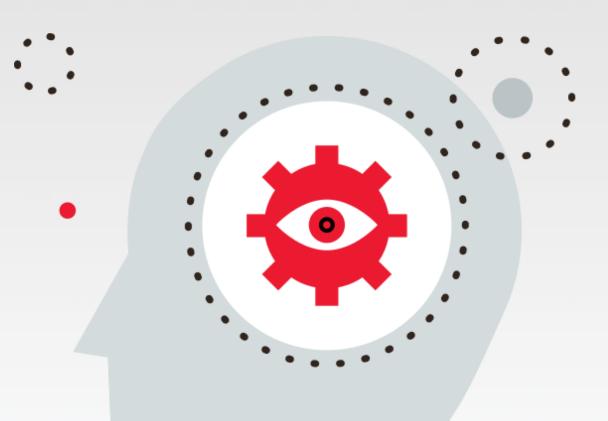

How many people have heard about Machine Learning?

So tell me...
Poll on Machine learning

How many people are using Machine Learning?

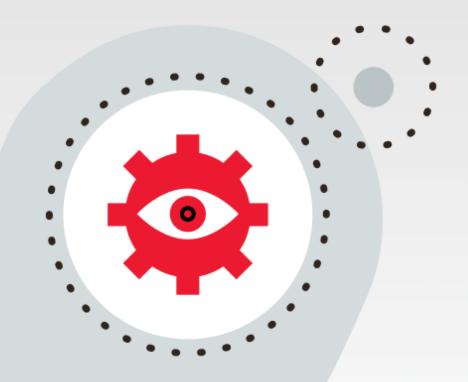

So tell me...

Poll on Machine learning

How many people know how Machine Learning * works?

So tell me...
Poll on Machine learning

How many of you have been pitched IP & Brand solutions full of buzzwords?

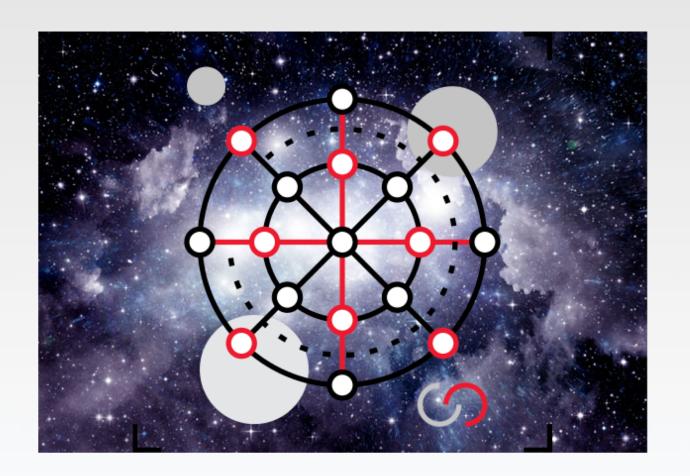

What is Machine Learning, and what is not?

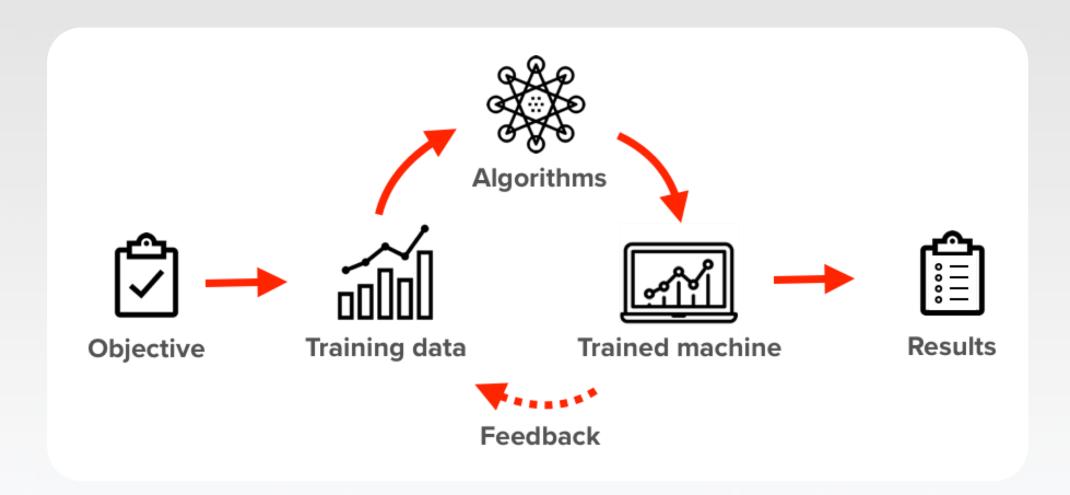

Think about the cosmos

Artificial Intelligence is the **universe**, within it there are **galaxies**, one of them is Machine Learning, and within a galaxy there are **planets**, like Deep Learning, Image recognition, etc.

But, how can a machine learn?

Why Machine Learning now?

It has been around for some time, so why the hype?

Data

Structured and unstructured data as well as it's storage has grown exponentially in the last decade. Data is also more accessible.

Algorithms

The algorithms and models
take advantage of both
GPUs and Big Data to train
large deep neural networks
with large data sets.

Computing

There are great

advancements in GPU

compute capacity along

with the hardware

becoming available at a

cheaper cost.

Successful ML applications in other industries

Credit Cards Fraud

Successful ML applications in Brand Protection

There are many ways how ML can be applied to our industry

One example of how Red Points is applying AI to fight counterfeit is using ML to fight circumvention techniques such as listings evolution

Successful ML applications at Red Points

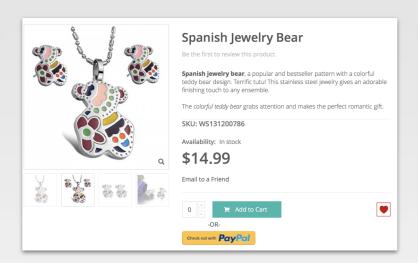

Example Tous

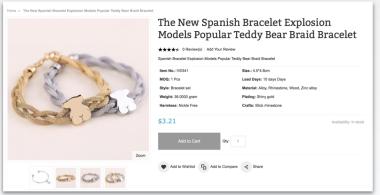

Panda Bear vs. Osos

At Red Points we are already using Al in our product.

Traditional Brand Protection vs. Automated

Cost Analysis

Based on interviews with our clients, we estimated the number of hours spent in all steps of the brand protection service with and without Machine Learning.

Thank you!

Visit us at our stand for a chat on how we are applying image recognition, natural language processing, big data, etc.
