Mobile Device Management

Securing and managing your mobile devices to protect your company data.

The Solution

The growing need to access company data from mobile devices has introduced an additional threat to your IT security. What would you do if a mobile device with your company data was lost or stolen? How could you ensure your data didn't fall into the hands of a competitor or cyber criminal? By using the services of AirWatch, we can remotely manage and secure your mobile devices. In the case of loss or theft, we can simply remove all company data such as email and documents, or wipe the entire device, thereby protecting your data. Key features include:

- Secure access to company resources
- Ability to set up organisational groups
- Easy device enrolment
- Automated compliance
- Device commands and messaging
- Deployment of company applications

AirWatch ensures all your mobile devices are configured and secured in accordance with company policy, whilst allowing you to remotely lock or wipe a device if required. Plans start from **£3 per user per month**.

Our Approach

AirWatch allows us to manage all of your enrolled devices, whether company or employee-owned. Once deployed, we can enforce additional security controls, such as requiring a pin to access email or device encryption, as well as performing actions such as lock, find or wipe device. AirWatch can also aid the deployment of company applications, whilst preventing the download of unauthorised apps. In the event of an employee leaving your organisation, we can delete all company data whilst leaving personal data intact.

These features provide an added level of management and control which phone operators alone cannot offer. Importantly, they allow us to manage, wipe and remove your data but never see it. Your data privacy is never compromised.

Key Benefits

- Enhanced security to maximise data loss prevention
- Single management control for all your devices
- Highly scalable to support your growing mobile needs
- Centralised distribution of profiles and apps
- Compliance with company policy
