

## Security

Protecting your data and systems from the latest range of security threats.

With the growing range of email and internet threats, protecting your business and your data has never been more important. We adopt a collaborative and consultative approach to understand your business needs and ensure you have the correct levels of protection. Key to this is striking the appropriate balance between security and usability.

### Email Anti-Virus and Anti-Spam

Protecting you against email-borne threats, such as malware, spam, phishing and spear phishing.

- Continuous protection against unwanted email
- Preventing malware from reaching your network
- Improving productivity and protecting users
- Applying company-wide email security policies

### Anti-Virus and Anti-Malware

Providing the final layer of defence for your systems by protecting your computers and operating systems from malware.

- Multi-layer protection for your systems
- Early detection and resolution of threats
- Firewall and browser protection
- Centralised reporting for full visibility

### Mobile Device Management

Securing and managing your mobile devices to protect your company data.

- Secure access to company resources
- Ability to manage, encrypt and wipe company data
- Quick deployment of company applications
- All devices compliant with company policies

### Web Security

Establishing additional layers of web security to block malware, enforce company usage policies and avoid web misuse.

- Protecting against web based threats
- Blocking 100% of known viruses
- Restricting access to websites to prevent misuse
- Logging all web browsing activity

Responding to **99% of all requests within one hour** and resolving **75% within one hour.**

### Key Benefits

- Protection for your business, data and brand reputation
- Collaborative and consultative approach to meet your needs
- Free anti-virus subscriptions as part of our support and management service
- Centralised reporting for improved visibility of threats
- Improved system reliability and performance
