

## Email Security, Continuity and Archiving

Fully integrated email security, continuity and tamper proof storage for your email communication.

### The Solution

Email has become the single most important form of business communication. Any outage, whether planned or unplanned, can prove costly. Guaranteeing constant access to your emails, whilst protecting against security threats and retaining a record of all communication is important. Mimecast's solution provides email antispam and antivirus, continuity and archiving services to protect your business against viruses and malware, unnecessary downtime and data loss. Key features include:

- 100% email service availability
- uninterrupted access to email
- emails scanned for malware threats
- 100% virus and 99% spam protection
- tamper proof copies of all emails
- data stored in an encrypted format
- quick search and instant access to archive
- seamless integration with Outlook

Mimecast sits in the cloud and seamlessly integrates with your email system to mitigate email risks and reduce the complexity of your infrastructure. Prices start from **£5 per user per month** (based on 25 users).

### Our Approach

We understand the importance of email for your business. With Mimecast, we offer enhanced email security by scanning all emails for spam and viruses prior to delivering them to your inbox. Any messages containing malware are automatically rejected.

Mimecast also guarantees constant email access. If your email provider experiences an outage, Mimecast automatically takes over to ensure you can continue sending and receiving emails, with no downtime.

Equally important is ensuring you have an accurate and complete record of all email communication. This can help for reference, compliance or regulatory purposes. Mimecast's archiving system stores a tamper proof copy of every email sent and received so that important data is never lost.

### Key Benefits

- 100% service availability SLAs
- Uninterrupted access to live emails and calendars
- Highly secure and resilient off-site, email archive
- Rapid and accurate company-wide search facility
- Protection against spam and malware before it reaches your network
