IMPORTANT: Completely build your LITE system before installing the Large Monitor Mounting System.
This system is only recommended on concave panels. In many cases with large monitors, a universal desk below is also recommended. Consult your dealer before installing a large monitor using this rod system.

1. Place vertical rods into nodes as shown. Secure in place by screwing caps onto the back side of nodes.

2. Attach the horizontal bar to the shelf brackets on each vertical rod. Use the thumb screws to secure. You should be using the holes closest to the middle of the bar.

3. Mount J hooks to the back of the monitor.

4. Lift monitor so that the J hooks, hook over the horizontal bar.

NOTE: Inspect the assembled system to ensure that it is stable before using.
