

The leader in manned and unmanned aviation risk management, safety, quality and training.

Who is Wyvern?

Since 1991, we have established ourselves as a global leader in risk assessment data and audit services. Over the years, we've provided safety intelligence data and onsite risk assessments to the business and private aviation communities. We partner with, and create relationships between:

- Charter operators
- Brokers
- Corporate travel
- Flight departments
- Consultants
- Aircraft owners
- Industry service providers
- Private flyers

The most safety-forward organizations in the industry choose our proprietary intelligence resources to make risk-based decisions in rapidly-changing markets and business environments, worldwide.

We continue to set the standard for air charter operators around the globe and protect the integrity of what we've built. We also have global presence with affiliates and auditors in every major market.

Wyvern Audit Products?

As the most experienced aviation risk management assessor and advisor in the industry, we've created an impressive portfolio of products and services to help clients mitigate aviation risk. They are:

Wingman: The choice is clear. When you fly with a Wyvern Wingman, you've chosen to fly with the best. Here's why:

- The most comprehensive commercial aviation standard that focuses on international best practices, management policies, procedures, and documented evidence of compliance with local regulations, maintenance, training, and qualifications.
- Less than 10% of Air Charter Operators worldwide meet the standards to be certified as a Wyvern Wingman.
- Global 2000 clients, and top tier charter brokers insist on flying with certified Wingman Air Charter Operators, particularly when selecting operators outside their home territory.

IS-BAO: We have reviewed and accepted the IS-BAO standards as complementary to the higher Wingman standard. Prospective Wingmen must be IS-BAO Stage 2 compliant with a robust Safety Management System and other safety enhancing systems.

GAP Analyses: We recognize that some clients are not ready for full Wingman certification, or IS-BAO stage 1, 2, or 3 certification. For those clients, we offer a GAP analysis to identify areas of concern, areas where the client needs improvement, and recommends corrective actions to address those deficiencies to prepare for a Wingman or IS-BAO audit.

IS-BAH: Our auditors are qualified to evaluate ground handling operations on the IS-BAH standards.

EXACT: An international best practices standard for Unmanned Aerial Vehicles/Remotely Piloted Aircraft Systems.

What is the WINGMAN STANDARD?

The purpose of THE WINGMAN STANDARD is to reflect Industry Best Practice performance expectations for commercial air charter operations. WYVERN is not a regulatory authority; compliance with THE WINGMAN STANDARD, beyond the regulatory requirements of the governing Civil Aviation Authority (CAA), is voluntary.

The scope of the qualifying evaluation includes those operational activities referenced in the IS-BAO protocols, a review of the company operational history and safety record, Safety Management System (SMS), Internal Evaluation Program (IEP), administrative composition, technical documentation, pilot and aircraft records, training requirements, and maintenance operations including technician training and experience.

An Operator's adherence to THE WINGMAN STANDARD and successful audit conducted by WYVERN will achieve WINGMAN Certification.

Are you ready to differentiate your operation from your competitors by working with Wyvern? If the answer is yes, you've committed yourself to risk mitigation and to giving your clients peace-of-mind knowing they are with one of the best in the business.

Why Achieve Wingman Certification?

There are several reasons. They include:

- Demonstrated adherence to the industry's most stringent standard by an independent and credible industry expert.
- Demonstrated commitment to Safety Management as a core business practice.
- Inclusion in The Wyvern Report, a global directory of Wingman certified operators.
- A demonstrated commitment to continuous improvement and a strong safety culture.
- A subscription to the Wyvern data platform included.
- Ability to run Pilot and Aircraft Safety Surveys (PASS), a trip specific risk management tool that measures the flight against compliance with Wyvern standards.
- Peace-of-mind to potential clients that they are flying with the best in the business.
