

# Improving Healthcare Through Partnerships

We are creating new processes and collaborations as we navigate our moves during a very special and unique era that magnifies the scope and speed of changes:

- Creation of Scientific **Knowledge**
- **Populations** access to & their expectation from health services
- Dependency on **Technology** and embedded intelligence
- **Communications** tools, format, speed

# Increase Collaboration Based on Optimal Engagement of Clinical Engineering Skills

Changes lend to increase recognition for the role of C.E. professionals, however to impact care outcomes & gain a seat at the table of the healthcare team, we must:

- Develop globally shared set of required professional competencies
- Identify who is at the table and understand their languages
- Learn how to communicate with clinicians, administrators, regulators, and policy makers
- Measure, publish and share success stories.

**IFMBE**

Clinical Engineering Division
