

Partnering to Improve Patient Care

Ann O'Brien RN, MSN, FHIMSS, FAAN

Smart Technology

- Medical Error – the third leading cause of death in the US
- Allows Clinical Engineering to do a full evaluation after an adverse event
- Enhances the understanding of the clinical workflow processes
- Provides discrete data for issue resolution
- Creates deliberate partnership with CT/CE
- Delivers extraction at the *keystroke level*
- Changes interaction with the clinician
- Increases capacity to care for high risk pts.

Investigating Events & Partnering for Success

- Enhance opportunity for learning from experience
- Access to more granular medical device data for interpretation
- Maintain practice standard
- Extract detailed information
- Review is a collaborative analysis- not just a workflow review
- Move to high reliability through partnership and transparency
