KiZAN's Azure Site Recovery offering is designed for organizations seeking greater resilience for compute resources.

Disasters are no longer confined to weather-related incidents. Organizational risk of data loss and downtime is increasing every day. Organized crime, malicious attacks, ransomware, hardware failure, and power loss are only a few of the scenarios that can take a business offline. If disaster strikes, how long will your organization be able to survive without your data?

Many organizations are looking to leverage cloud-based technologies as a part of their business continuity and disaster recovery efforts. KiZAN's Azure Site Recovery pilot program will build the foundation of a resilient BCDR strategy using dependable Azure resources. The proof of concept program will replicate up to 10 machines, test for failover readiness, and train your team on the necessary components. KiZAN will also deliver cost estimates and service callouts to provide a clear understanding of the necessary Azure resources, and the monthly costs for the sites in scope. Upon completion, your organization will be capable of expanding your footprint to include your entire production environment.

Common Questions

"What do we need to do to protect our organization from data loss?"

"What are the differences between backups, disaster recovery, and business continuity?"

"Are we properly defending our customers?"

"What technologies can help preserve our data?"

"How quickly will we be able to recover from a disaster?"

Sample deliverables include

- ▶ Replication of up to 10 servers
- ▶ Capacity planning
- ▶ Configuration of Azure Site Recovery instance, failover plans, and supporting network resources
- ▶ Deployment of configuration & process server(s) and agents
- ▶ Failover testing
- ▶ Configuration and documentation review
- ▶ Azure security tools review

\$25,000

Azure solutions

- ▶ Business Intelligence
- ▶ Big Data & Analytics
- ▶ Machine Learning
- ▶ Cognitive Services (custom speech-to-text)
- ▶ Data Warehousing
- ▶ Lift and Shift
- ▶ App Modernization
- ▶ Enterprise Integration
- ▶ Business Continuity
- ▶ DevTest and DevOps
- ▶ (more)

Experience

Your partner in success

- ▶ Leveraged cloud solutions to improve custom application performance and scalability. –*IntegraConnect*
- ▶ Developed solution to provide real-time insight and analytics dashboards for vast streams of data, gaining immediate visibility into sales and operations. –*ServiceMaster*
- ▶ Developed Ai system providing a comprehensive NLP and text analytics platform. –*Asurion*
- ▶ Provided unprecedented insights into sales and marketing activities by extending the customer's CRM with a new data warehousing solution that combined data from internal and third-party sources. –*US World Meds*
- ▶ Provided insight into sales pipeline of the leading global provider of large-scale data warehousing technologies with the deployment of a cloud-based analytics solution. –*Teradata*
- ▶ Provided a DevOps engineer to oversee and create processes which improved application deployment via DevOps and the automation of code releases. –*American College of Education*
- ▶ Implemented Azure Site Recovery and provided best practices around the Operations Management Suite to improve their disaster preparedness. –*Texas Roadhouse*
- ▶ Ensured PCI compliance through review of current environment and roadmap for secure network and applications. –*Beyond*
- ▶ Developed big data and analytics solution which reduced the processing time of IoT sensor data from 17 hours to 10 minutes, revealing intelligence and operational insights. –*LG&E*
- ▶ Modernized legacy application to support real-time transactions and data synchronization using message passing technologies and real-time broadcast with ASP.NET MVC and SignalR. –*Dismas Charities*
