Cloud...with Confidence

How will your organization secure your data and applications both on-prem and in the cloud? KiZAN can provide the guidance and secure cloud architecture that will enable you to grow with confidence.

"My organization has become heavily security conscious after the malware attacks, but we're not sure where to focus."

"Our leadership wants us to adopt cloud infrastructure and platform services, but I.T. is not sure of the security."

"As our development teams are building products, such as SaaS offerings for clients or other solutions, we are not sure what modern tools work for managing the infrastructure and apps involved."

Together, We Will Address Your Security Challenges.

KiZAN will architect a secure long-term strategy for your infrastructure and applications and guide the creation of processes and a framework that ensures the health of your organization. As an experienced healthcare technology partner, KiZAN will provide the service and expertise your healthcare organization needs to remain secure, efficient and compliant.

Keys to Success

- ▶ Proven security blueprints
- ▶ Customized proofs of concept
- ▶ Trusted compliance reviews (actual vs. artificial requirements)
- ▶ Legitimate identity protection
- ▶ Documented best practices
