Threat Analytics and Protection

KiZAN recognizes that security is a critical concern for business in today's information-driven world. While many security solutions focus on the network boundary and any attempted intrusions, most organizations that are penetrated don't discover the threat for months on average due to a lack of insight within the internal environment. Microsoft has developed solutions to address this potential blind spot, and KiZAN is ready to assist with the evaluation of these solutions within your environment.

Advanced Threat Analytics (ATA) Proof of Concept

\$3,000

- Identify up to 3 domain controllers (DC's) to target for the PoC
- Review networking considerations and solution sizing guidance
- Install and configure ATA and configure data collection
- Review the management console and common use cases
- Review collected data and provide best practice guidance

Windows Advanced Threat Protection (ATP) Proof of Concept

\$2,000

- Signup for a PoC trial subscription
- Configure up to 5 Windows 10 devices for ATP usage
- Review Security Center portal and review common use cases
- Roadmap ATP implementation for the business
