

## Hybrid Cloud Integration Roadmap Workshop

*Developing a hybrid integration strategy that aligns IT with business needs is crucial to your success in today's digital economy*

### The Value

As hybrid cloud and IBM Bluemix™ integration capabilities progress, position your company to take advantage of these changes and empower its progression to cloud. Working with Lighthouse to develop a hybrid integration roadmap can provide your business with the following benefits:

#### Deliver Exceptional Customer Experience

- Integrate your native and cloud apps and your existing enterprise apps to ensure seamless connectivity between your back-end and front-end systems regardless of location

#### Protect Your Brand

- Secure and manage every cloud, mobile and API transaction in your ecosystem

#### Create New Market Opportunities

- Discover, create and deploy APIs to expand your ecosystem, creating opportunities to reach new markets

#### Gain Visibility into your Ecosystem and IT Operations

- Identify, isolate and resolve problems before they impact your business

### What to expect

A one-day, non-intrusive workshop with a Lighthouse Senior Solution Architect to assess your current environment, business drivers, and goals. Working together, we develop a strategy enabling your company to implement technologies and approaches to connect your many ecosystems together in a secure and cost effective way.

### Workshop includes

- A detailed discussion to understand your current and future IT plans, business goals and drivers
- Review 3-5 actual or composite company use cases as potential hybrid cloud candidates during a solution white-board session comparing and contrasting the "AS IS" and "TO BE" ecosystem
- Document of key architectural decisions

### The Deliverable

Upon completion of the analysis, we deliver a report detailing workshop findings, high level recommendations, and a hybrid integration roadmap specific to your enterprise. The report includes additional documentation, including:

- Executive Overview
- Current high-level operating environment
- Near- to mid-term recommendations
- Mid- to long-term recommendations
- Future state architecture and operating environment
- Comparison of integration capabilities and approaches
