**Lincoln, Rhode Island, USA – March, 2015 – [Lighthouse Computer Services \(CS\)](#)**, award-winning, regional IT solutions and services leader and IBM Premier Business Partner, recently announced the addition of [Ryan Marsh](#) as Enterprise Solution Architect. Ryan is a standout among industry architects, with many years of successful design, implementation and fine tuning of high-end mission critical systems for top tier clients like the DoD, Blue Cross Blue Shield, and major banking institutions.

Lighthouse Director, Jim Whitehouse announced: “We’re extremely proud to welcome Ryan to the Team. He’s a major talent and is already working closely with the Sales Teams and myself to continue to build an industry-leading IBM Software Services Team and deliver world-class software solutions to our clients.”

Ryan’s experience includes 6+ years supporting DOD / Federal Services Sector web system development and integration projects; 11+ years managing and supporting middleware / SOA solutions and services for a top regional bank; and, most recently, leading multi-million dollar technology initiatives at Blue Cross Blue Shield of Rhode Island as part of the Enterprise Architecture (EA) Team.

Citizen Bank’s “Corporate Insight” recognized Ryan with its "Gold Monitor" award in their 2012 Bank Monitor Awards Report for automating the Account Opening process on [citizensbank.com](http://citizensbank.com). Ryan’s design enabled consumers to apply for a bank account online, receive an instant decision and open an account in six minutes instead of 11 days. The new process dramatically improved the customer experience, increased online sales by 600%, and created a scalable platform for continued growth.
