IBM's Resilient Incident Response Platform

Respond to Incidents Faster. Smarter. Better.

Today's businesses know they need to respond quickly and effectively to complex security threats across their enterprise systems. Yet, integrated and robust response to day-to-day events that security teams must contend with is a growing challenge shared by organizations of all sizes and across all industries. Responding well in the face of a cyber exploit is harder as the stakes have gotten higher and the actors more sophisticated.

IBM's Resilient Incident Response Platform (IRP) is the leading platform for orchestrating and automating incident response processes. The Resilient IRP quickly and easily integrates with your organization's existing security and IT investments. It makes security alerts instantly actionable, provides valuable intelligence and incident context, and enables adaptive response to complex cyber threats.

Empower Your Security Teams with a Single Hub for Incident Response

The Resilient IRP integrates with existing security systems to create a single hub for incident response, transforming the organization's security posture by aligning people, process, and technology.

Purpose-Built for Incident Response

The IRP platform enables incident response teams to manage and collaborate on their response directly within the platform. Unlike ticketing systems and other general-purpose IT tools, IBM's IRP is secure, fully-configurable, and purpose-built for incident response. Comprehensive analysis, customizable dashboards, and robust reporting features ensure senior leadership can access key information when they need it.

The Resilient IRP allows security teams to quickly and easily:

- **Integrate:** Connect to and unlock the value of all your security investments—for example, SIEM, ticket systems, IDS/IPS, and more.

- **Automate:** Enable custom action automation and enrichment—for example, accessing threat intel, active directory, or SIEM data, or opening and updating IT tickets.

- **Configure:** Allow security teams to build and maintain their own SOPs and action plans within hours or days—not weeks or months.

Analyze, Respond, Resolve and Mitigate Incidents Faster with the Resilient IRP

The Resilient IRP produces instant incident response plans and adapts in real time as incidents evolve. It can sit on top of your current security infrastructure. It supports automated escalation, easy collaboration, and out-of-the-box and custom reporting. The platform features security, action, and privacy modules to ensure appropriate incident response from alert through compliance.
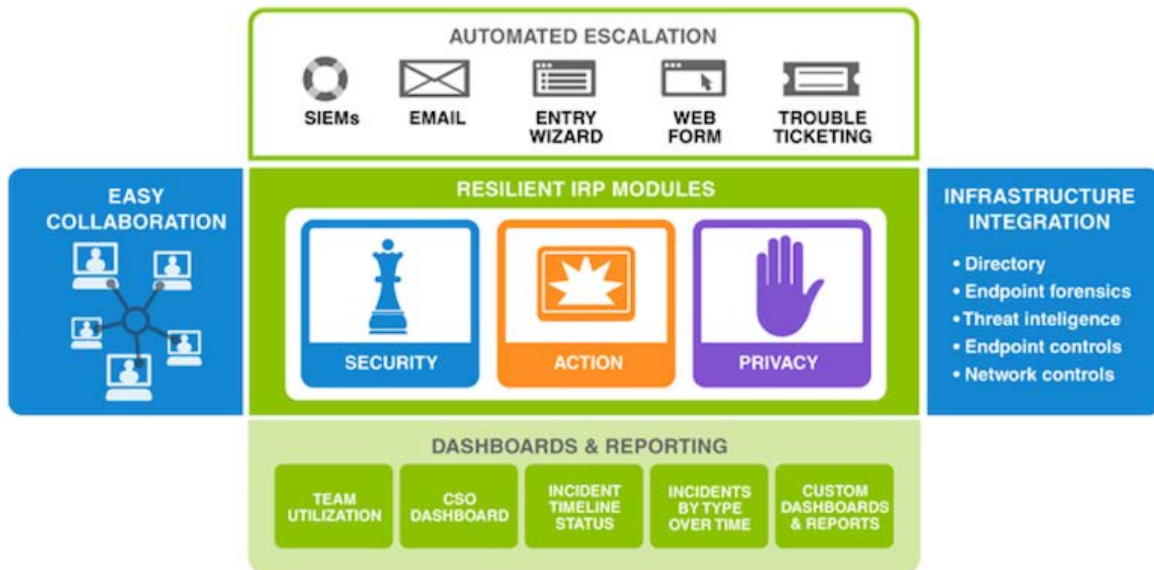

Why choose Lighthouse Computer Services?

Protecting your business with a security response solution demands a proven and thorough approach to deployment. As your expert partner, Lighthouse Computer Services can help your business select, procure, and integrate IBM's Resilient IRP into your IT and business operations. Our security experts have deep experience in IBM technology and a proven track record of protecting client's businesses by deploying IBM tools and solutions.

Lighthouse Computer Services also has a long history as a closely connected partner with IBM. We are proud to be recognized year after year as a preferred partner of IBM. We received IBM's Beacon Award for North America Strategic Partner in 2016, we received IBM's Premier Business Partner Choice Award in 2014, we were an IBM Watson Finalist in 2017, and 2018 IBM North America Top Strategic Business Partner Excellence Award. For over 23 years, we've served businesses across the US Northeast. With regional knowledge and local resources at the ready, we're here to help your business succeed.

The Next Conversation

Let's start an engaging conversation about how IBM IRP can optimize your security response capabilities to help protect your business today and adapt to the demands of tomorrow. Let's get started.
