

Lighthouse Hybrid Cloud Solution Workshop

Take the fast lane to a smart, tailored hybrid cloud strategy. Align IT with complex business needs and lead the way to success in the digital economy.

*By Andrew Tenaglia, Director, Cloud Practice,
Lighthouse Computer Services*

As hybrid cloud and integration technologies progress, it's important to position your company to take advantage of these improvements and empower its successful progression to cloud.

The Lighthouse Hybrid Cloud Solution Workshop is an on-site professional engagement designed to help you do just that.

It combines your goals with our experience and proven methodology, getting you more quickly to an optimized hybrid cloud plan that's built for you.

When the transition goes to plan, you can achieve more in less time with better use of resources:

1. Speed Application Delivery with Container Application Platforms

Lighthouse will guide your organization to a successful container-based software delivery infrastructure using proven best practices and approaches to achieve faster software development and organizational efficiency.

2. Enable DevOps without Leaving Legacy Behind

Understand how to effectively modernize your software development and IT operations by applying DevOps and Agile methodologies to new and existing legacy environments. Lighthouse will help you identify the commonalities in operating systems and infrastructure components to benefit your organization.

3. Digital Innovation Through Agile Integration

Lighthouse will help develop approaches to enterprise integration, backed by flexible, cloud-ready technologies supporting an integrated and agile enterprise. Our architectural approach will combine agile methods and practices with technologies for the purpose of rapidly integrating applications and data.

What to expect:

This is a one-day, non-intrusive workshop with a Lighthouse Senior Solution Architect to assess your current environment, business drivers and goals.

Working together, we develop a strategy enabling your company to implement technologies and approaches to connect your many ecosystems together in a secure and cost-effective way.

Workshop includes:

- A detailed examination of critical factors driving and inhibiting your hybrid initiative, including your current status, your IT and business goals and resources at hand.
- Structured review of several use cases (based on actual or composite engagements) as candidate hybrid cloud models. This is an interactive exercise conducting with in a white-board session comparing and contrasting “AS IS” and “TO BE” ecosystems.
- Documentation of key architectural observations and decisions.

The Deliverable

We deliver a comprehensive report detailing workshop findings and our recommendations with documentation, including:

- Executive Overview
- Hybrid Cloud Roadmap tailored to your specific goals and resources.
- Current high-level operating environment
- Near- to mid-term recommendations
- Mid- to long-term recommendations
- Future state architecture and operating environment

Put 23 years of Lighthouse technical leadership to work for your business.

Here at Lighthouse, we've been working since 1995 toward one goal:

Helping clients achieve more success faster with the smart application of business technologies.

In addition to practices in all other essential IT disciplines, Lighthouse offers a wide range of cloud services, including applications, data services, planning & consulting and system architecture, sales and service for leading technology makers.

Want to learn more?

How can a Lighthouse Cloud Solution Workshop help facilitate your move to the cloud?

Start with a 20 minute discovery call to talk about where you are and what needs improvement, and I'll explain how we can help.
