

WHY EPOINT?

TAILOR-MADE

Reports are built in the exact way you (or your management) would like to see them. Or a step further, in the way they need to communicate with other internal systems.

INTERACTIVE

Views can be modified without the support of IT.

TRANSPARENT

Every formula and source used in our spreadsheets always remains visible.

ADDED VALUE

Our reports are to the point and make clear what decisions to take.

UP TO DATE

Energy prices change every day, so does your ePoint.

SECURE

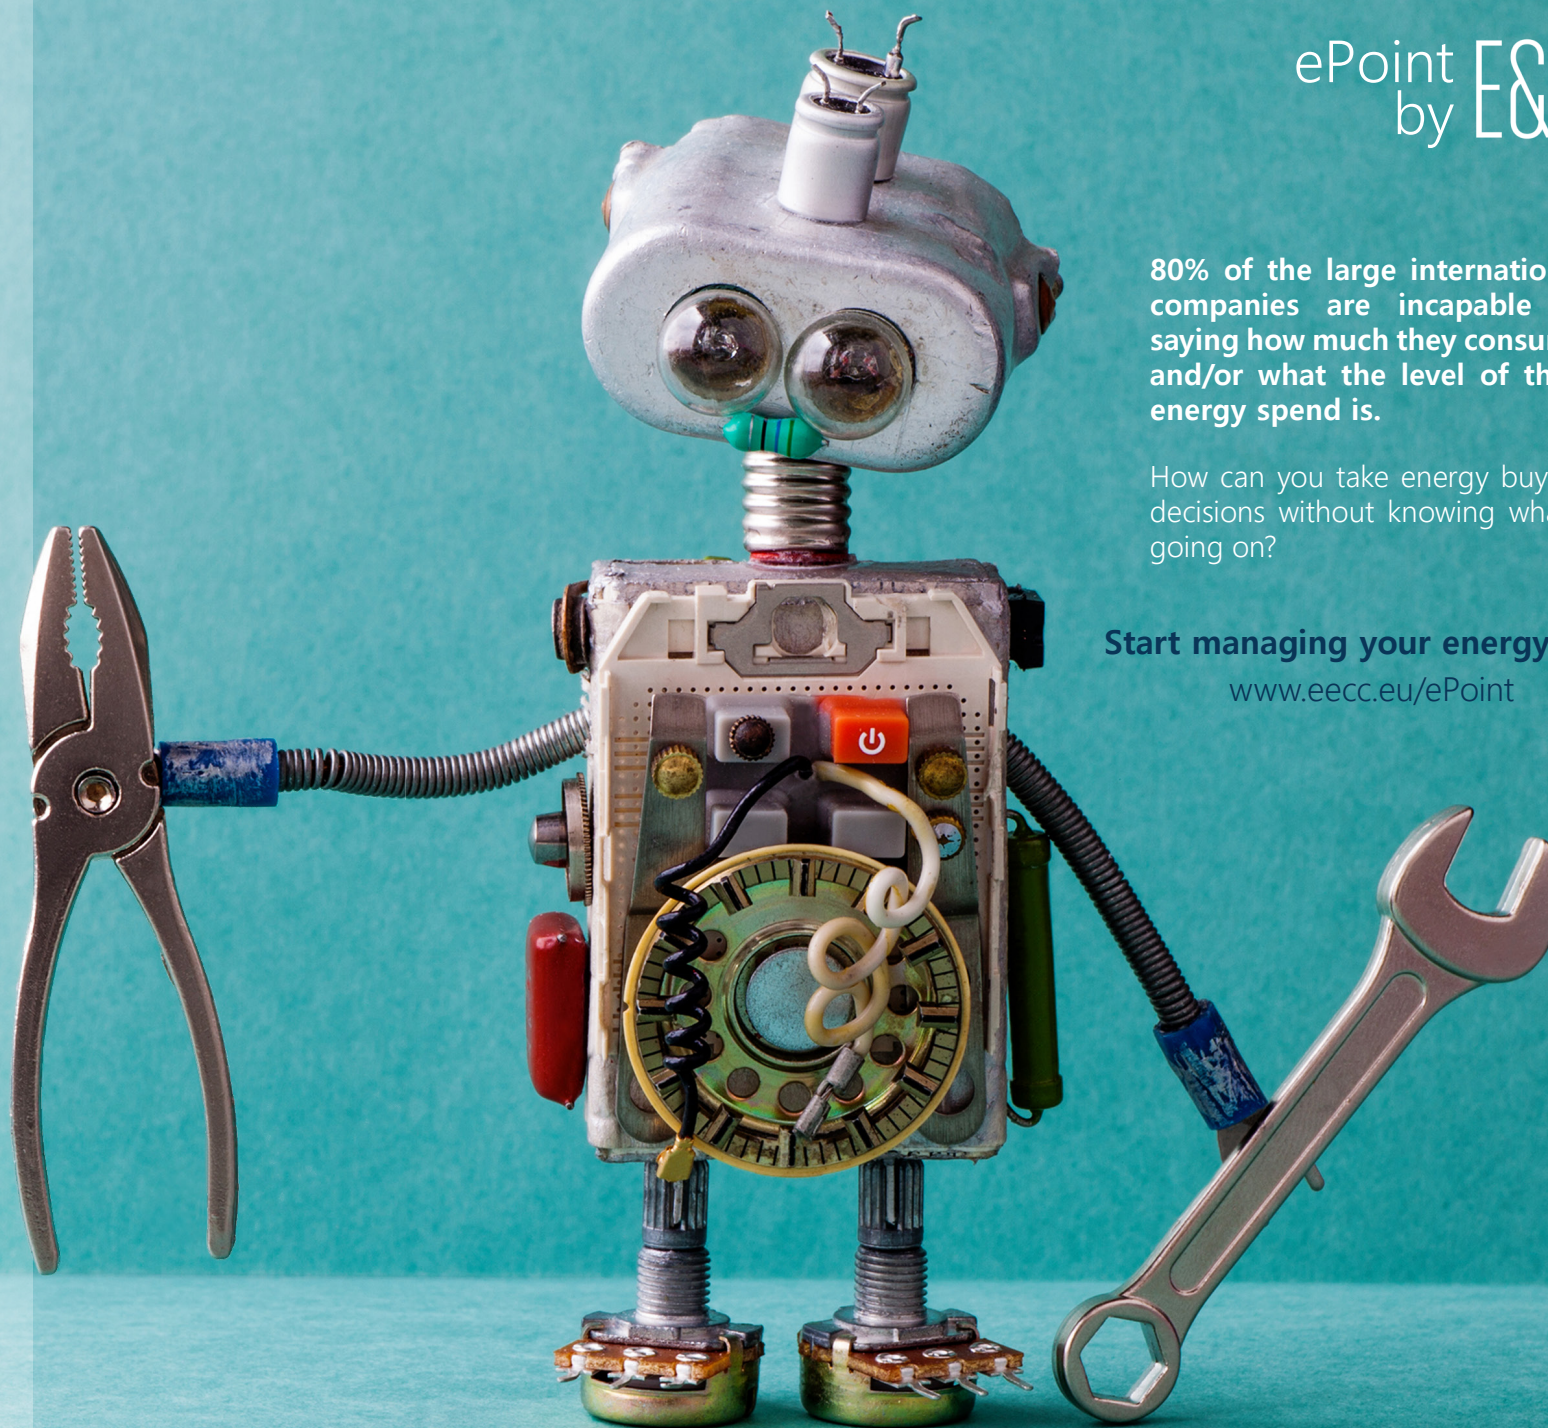

You don't want your competitors to know your energy cost.

ACCESSIBLE

Different document libraries to upload, store and download any file.

MULTIPLE USERS

Set up as many different access rights as you may need.

ePoint
by E&C

80% of the large international companies are incapable of saying how much they consume and/or what the level of their energy spend is.

How can you take energy buying decisions without knowing what's going on?

Start managing your energy data:

www.eecc.eu/ePoint

RELIABLE ENERGY DATA MANAGEMENT TO SUPPORT YOUR DECISIONS

Do you remember what happened in September 2019 when EDF informed the French nuclear safety authority on the deviations of steam generators' welding they had observed? The French year-ahead electricity price went up by 7,1%.

If you apply solid risk management, you probably considered taking a protective hedge. Did you easily find out how much of your volume was still open? Maybe you had to start searching your mailbox or ask one of your colleagues for an ad-hoc overview? What about your Belgian plant, based in a market also being impacted by the French electricity prices? You quickly need an overview of the contracts you have in place at your different sites to ask your supplier for a quote.

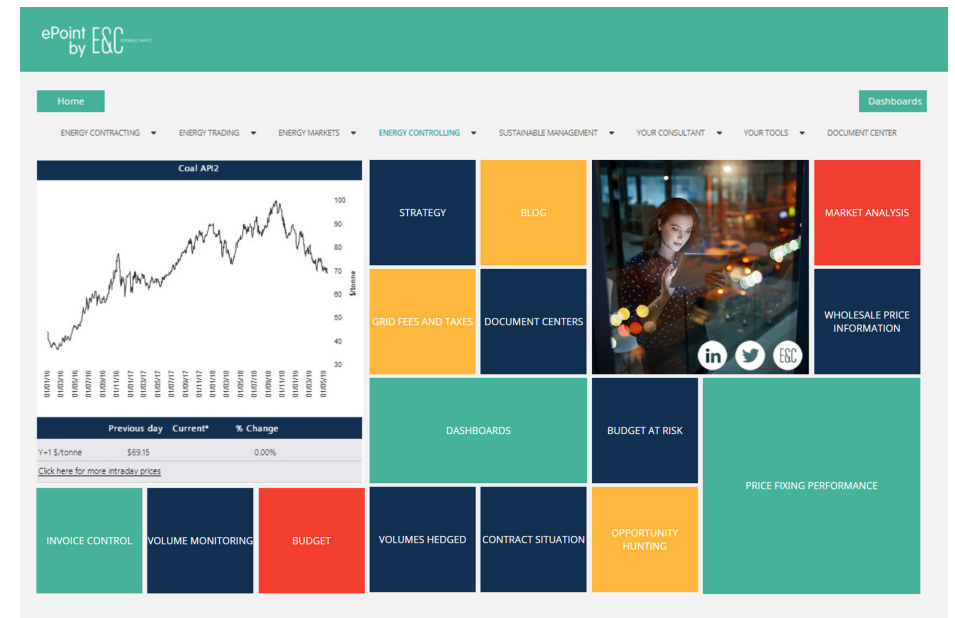

Once the hedge is confirmed, how quickly can you calculate the impact on your future spend? Can you do it while you are taking the decision?

And when you are in the middle of preparing a budget. Do you know your actual spend to base next year's budget on?

Energy procurement entails so many different aspects and keeping track of all the information involved can be a difficult and time-consuming task, especially when your organisation has many different production sites.

**Did you ever count your
amount of data?**

20 connections:
= 4.920 data entries
+ 8.760 measurements for gas
+ 35.040 measurements for electricity

At E&C we've created our own online tool to facilitate energy procurement. The first version of ePoint was launched in 2008. We are now at version 3.0 and we are continuously adding new features.

We dare to say that we have the most flexible system due to its set-up. Using excelsheets and powerBI for our reporting, we can easily adapt reports to your particular needs.

ePoint is also like a restaurant with an open kitchen. Customized calculations are made in spreadsheets that we share with you without deleting formulas. So, no discussions on how we cooked up that figure. This means we can set up reports in the way they bring the most added-value to your daily job.
