

Primary Cells Product Information Sheet

Cell Type: Plasmacytoid Dendritic Cells

Cell Count: 0.5×10^6 cells

Product Description

Primary human Plasmacytoid Dendritic cells were isolated from peripheral blood mononuclear cells using negative immunomagnetic separation techniques.

Cells were obtained using Institutional Review Board (IRB)-approved consent forms and protocols.

Donor Status: Normal

Characterization Criteria: Cell count, viability, purity, donor virus testing, age, sex, ethnicity, weight, height, smoking status, other information

Format: Plasmacytoid Dendritic cells are frozen in CryoStor® CS10.

Purity: The purity of Plasmacytoid Dendritic cells is $\geq 85\%$, defined as CD123+ and CD303+, by flow cytometry.

Anticoagulant: Acid-citrate-dextrose solution A (ACDA)
