Jitterbit

ORACLE® + NETSUITE

Get Connected and Amplify the Value of ERP and CRM Data

"Jitterbit provides us a standard platform on which to build our integration projects, allowing us to quickly and cost-effectively synchronize our ERP and CRM apps."

Keith Lovern, Technical Operations, Acal BFi

NetSuite helps thousands of companies plan all aspects of their business in the cloud. But to get the most out of NetSuite, companies need it to reflect information from many other sources, including CRM systems, databases, or custom apps.

Jitterbit makes it fast and easy to connect NetSuite to other popular systems, improving every company's ability to get the most out of NetSuite. Shorten integration implementation time and make business processes as smooth as possible with pre-built templates that even non-technical users can deploy and manage.

By connecting NetSuite to other systems, companies can extract greater value from NetSuite and operate with complete confidence that every decision made and resource allocated is based on the most accurate, up-to-date information.

Jitterbit offers the speed and flexibility needed to enable successful cloud integration and affords the opportunity to select NetSuite as a system of record for accounting, product information, or even customer information based on individual business needs. With Jitterbit in place, NetSuite becomes the reliable backbone of a successful digital business.

NetSuite Ecosystem Benefits

- Connect the front and back office quickly, seamlessly, and accurately
- Amplify the value of all information in NetSuite by connecting it to other systems
- Establish a clear system of record to eliminate data duplication and inaccuracy
- Connect disparate systems to take full advantage of NetSuite to manage all products, accounting, customers, and other information
- Templates accelerate time to value when connecting NetSuite with other systems

BENEFITS OF CONNECTIVITY

- ✔ Gain real-time visibility into all aspects of the business
- ✔ Save time and empower employees to focus on their core jobs
- ✔ Ensure that data is accurate and synchronized everywhere
- ✔ Automate processes and streamline business operations
- ✔ Enable real-time customer self-service
- ✔ Customize sales and marketing offers for customers
- ✔ Realize return on investment quickly, with low total cost of ownership

Intuitive Integration

Jitterbit automatically discovers system configurations to help you get started quickly. The user interface allows non-technical users to point and click to define source and target systems, drag and drop to map data transformations and easily run integration operations on batch, trickle or real-time schedules. A fully featured administration console provides reporting, notifications, and detailed user and group permissions.

Shortcut to Success

Jitterpaks allow you to import, export, and share every aspect of an integration, including document definitions, data mappings and transformations. Pre-built Jitterpaks for common integration scenarios give you a jumpstart on your project.

SaaS Applications: Salesforce, NetSuite, Workday, ServiceNow, and more

Enterprise Applications: SAP, Microsoft Dynamics (CRM, AX, GP, NAV, SL) PeopleSoft, Oracle, JD Edwards, QAD, Infor, and more

APIs: HTTP/S, Web Services (SOAP, REST), Custom API publishing and management, OData Services

Databases: Oracle, SQL Server, DB2, MySQL, Sybase, Teradata, and more

Other Protocols: ODBC, JDBC, FTP, File Shares, LDAP, SMTP/POP3, and more

Data Formats: XML (WSDL, XSD), All EDI (X12, EDIFACT, TRADACOMS, XML, CICA, HL7, etc.), Flat Text Structures, Hierarchical Text Structures, and more

Existing SOA Platforms: webMethods, Tibco, IBM WebSphere, BEA WebLogic, and more

THREE-STEP INTEGRATION

1. **Design** your own integration requirements or let Jitterbit automatically discover basic system configurations.

2. **Deploy** your mappings and operations to high-performance distributed run-time agents (locally or cloud).

3. **Manage** your integrations with the administration console. Track operation queues, view activity logs, and get real-time status alerts.
