

# M107

American Ordnance LLC, a company of Day & Zimmermann, produces the Projectile, 155mm High Explosive ammunition for the U.S. Army, Marines and other State Department approved customers.

**USE:** This projectile is fired from 155mm howitzers and is used for blast effect, fragmentation and mining.

**DESCRIPTION:** The projectile is a hollow steel shell. The shape is ogival with a boat-tail for aerodynamic efficiency. A short or long liner version of the supplementary charge is contained in the deep fuze cavity. A threaded lifting plug closes the fuze cavity at the nose of the projectile for handling and storage. A rotating band encircles the shell casing near the base and is protected by a grommet before loading. A steel plate is welded over the base to prevent entry of hot propellant gases into the projectile interior.

**SPECIFICATIONS:**

Length: 26.93  
Weight: 95 lbs  
Filler: TNT  
Fuze: Various types  
Range: 18.1 km

Artillery 155mm  
High Explosive
