Fisher Tank Company Appoints New Director of Projects

Chester, PA, April 9, 2018 Fisher Tank Company, founded in 1948 in Chester, PA, has named Mike Goldberg Director of Projects.

The Fisher Tank Company Board of Directors appointed Mike Goldberg Director of Projects for Fisher Tank Company at their December 15, 2017 meeting. Goldberg brings 10 years with Fisher Tank Company and 20 plus years in engineering and construction to the newly established Director of Projects position with Fisher Tank Company. "Mike Goldberg has brought exceptional abilities and professionalism to his projects, working effectively with the Fisher team, our customers and our subcontractors" says Michael Szelak, past President and current CEO and Chairman of the Board.

A graduate of Pennsylvania State University in State College, PA, with a B.S. in Civil Engineering, Goldberg co-oped with the Pennsylvania Department of Transportation, performing construction oversight on a major highway reconstruction project. Goldberg has never looked back from that first construction experience, and from 1997 until 2007, he worked as a Field Engineer/Operations Supervisor and Project Engineer for major engineering and environmental firms.

Goldberg joined the Fisher Tank Company family in 2008 as a Project Manager and has served countless Fisher customers on a wide variety of storage tank projects, including very large multi-tank projects in challenging site conditions and complex operations environments. Mike looks forward to opportunities to galvanize the Fisher Tank project team into a cohesive unit and to further develop the company's performance in his new role as Director of Projects.

"We are proud to have Mike as our new Director of Projects and look forward to his leadership across our project management team," says Szelak.

Fisher Tank Company is an employee owned (ESOP) company headquartered in Chester, PA. Fisher Tank provides field erected welded steel storage tanks for a wide variety of industrial applications, including power generation, bulk liquid storage, municipal water storage, water and waste treatment operations, chemical manufacturing, air transportation fuelling, fire protection and more. The Company operates fabrication facilities and offices in Chester, PA, and Leesville, SC, and a sales and engineering office in Cropwell, AL.
