

CARE INSTRUCTIONS

Window film needs time to dry to the surface to which it is applied. It is quite normal for the newly installed window film to appear wet, cloudy, or hazy to the eye. It is also common for the newly installed window film to show evidence of water bubbles. Do not be alarmed, this is simply residual moisture trapped under the film that evaporates as the film cures to this window over the drying period mentioned below. It can sometimes take up to 60 days for all the moisture to evaporate.

*Please do not touch or press on these bubbles as it will prolong the drying process and damage the film.

CLEANING

- Please do not clean your window(s) for approximately 45 days after the installation
- Window Films may be washed with **ammonia free**, common household washing solutions
- Sponges, clean squeegees or soft cloths are all recommended to be used with cleaning solution
- DO NOT USE Abrasive type cleaning agents and bristle brushes that would scratch the film
- To maintain your warranty, please do not use tape or other adhesive products on the film

WARRANTY

Warranty covers peeling, bubbling and discoloration

*Warranties are non-transferable

Residential: Lifetime
