

Successful pharmacies rely on RMS.

At a time when competition from chain stores is fiercest, the question arises - how do I efficiently increase script volume? Now you can extend the reach of your pharmacy to the customer's home by implementing RMS' Mobile Delivery Option. Coupled with credit card tokenization, this becomes a powerful solution to grow revenue and improve customer service.

### How it Works

RMS' Mobile Delivery Module, utilizing a portable Android PDA with built-in scanner, allows you to capture the exact same signatures you capture at the register, but at the customer's home.

- Using RMS' cloud-based tokenization capability with merchant processing services, you'll ring up the sale at the register prior to delivery
- Selecting Delivery at the register sends the transaction to the handheld
- When making the delivery, you'll scan the receipt stapled to the bag, or pick from the on-screen list
- Have customer sign mobile tablet
- When delivery driver returns, the mobile unit will sync up all collected signatures to the respective transaction, giving you easily retrievable electronic signatures and eliminating all signature paperwork

### Device Features

- Industrial design, ergonomic, and robust
- 8 hour battery life
- Multi-touch capacitive screen
- Wireless 2.4g 802.11 b/g/n
- Built-in GPS
- 2mb camera with barcode optimization

### Hospital Outpatient Pharmacies

- For non-compliant PCI networks, this becomes a great solution for capturing signatures at discharge while capturing payment at the outpatient register!

*\* Pharmacy system dependent. Talk to your sales rep as to which signatures can be collected for your pharmacy management system.*

### Retail Management Solutions
