

# 1<sup>st</sup> Point of Contact Screening

## MEDITECH EBCD Update

EHR

Update

### Updated EHR 1<sup>st</sup> Point of Contact Screenings

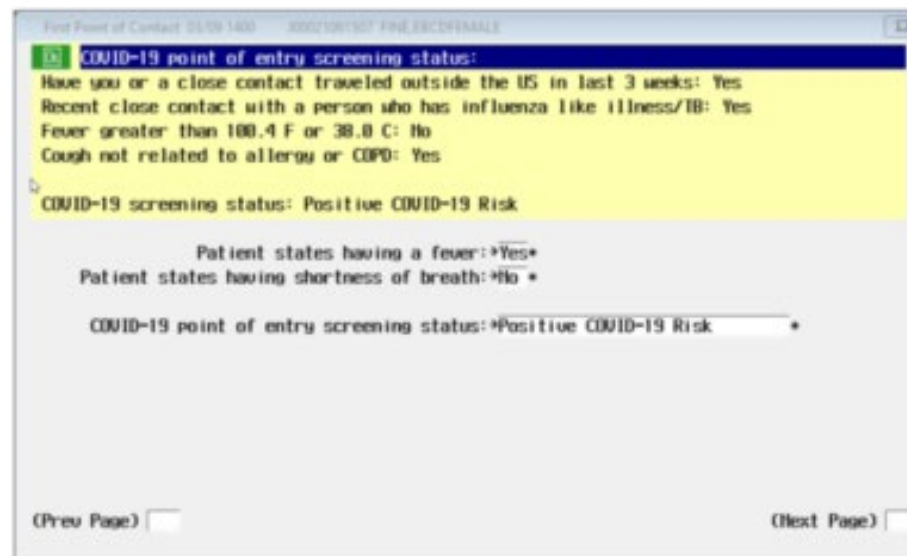

Determination of COVID-19 RISK screening status is identified within the screen settings predetermined based on CDC recommendations.

- Addition of COVID-19 inclusion criteria and programming which will result in a calculated risk screening based upon multiple 1<sup>st</sup> Point of Contact responses.
- An additional fever question has been added specifically for COVID-19. We will continue to ask and document if the patient had a fever of 100.4 or greater in the past 7 days. If the patient has not had a fever of 100.4 or greater, we will now ask and document if they state having any degree of a fever. This is a very important piece to capture for COVID-19 risk screening in a case of milder symptoms.
- A new query to capture reported shortness of breath.

Scan QR code to watch the screening process.

## 1<sup>st</sup> Point of Contact Screening

First Point of Contact 01/09/2020 10:02:10AM/10/1/2019\_EBCD/FINALE
